PATENT- OG VAREMÆRKESTYRELSEN

DIPHENYL OX-INDOL-2-ON COMPOUNDS AND THEIR USE IN THE TREATMENT OF CANCER

FIELD OF THE INVENTION

The present invention relates to substituted 3,3-diphenyl-1,3-dihydro-indol-2-one compounds, and the use of such compounds for the preparation of a medicament for the treatment of cancer in a mammal.

BACKGROUND OF THE INVENTION

US 1,624,675 describes O-O-diacyl derivatives of diphenolisatine and that these compounds possess laxative properties.

While inhibition of protein synthesis inhibits cell proliferation, highly proliferative cancer cells may be more sensitive than normal cells to protein synthesis inhibition because many oncogenes and growth regulatory proteins required for effective cell proliferation are encoded by inefficiently translated mRNAs, and are dependent on eukaryotic translation initiation factors (Aktas et al (1998) Proc Natl Acad Sci 95, 8280 and references therein).

Protein synthesis is regulated in response to cell stress, which can be induced by environmental or physiological challenges (such as hypoxia, amino acid or nutrient deprivation), intracellular calcium load and protein glycosylation inhibition. For example, cell stressors such as clotrimazole, 3,3-diphenyloxindole, thapsigargin, tunicamycin and arsenite (Aktas et al (1998) Proc Natl Acad Sci 95, 8280; Brewer et al (1999) Proc Natl Acad Sci 96, 8505-8510; Harding et al (2000) Molecular Cell 5, 897-904; Natarajan et al (2004) J Med Chem 47, 1882-1885) act as translation initiation inhibitors, reducing both protein synthesis and cell proliferation.

The possibility that translation initiation inhibiters may have potential as anti-cancer drugs has been described previously (Aktas et al (1998) Proc Natl Acad Sci 95, Natarajan et al (2004) J.Med.Chem 47, 1882-1885). The Natarajan paper further disclose 3,3-diaryl-1,3-dihydroindol-2-ones which potentially inhibit translation initiation.

Protein synthesis is also regulated by the mTOR pathway, providing another link to a nutrient and amino acid status (Harris & Lawrence (2003) ScienceSTKE (212) re15; Nave et al (1999) Biochem J 344, 427; Beaunet et al (2003) Biochem J 372, 555-566; Inoki et al (2003) Cell 115, 577-590). This pathway is also linked to regulation of the translation initiation complex

(Cherkasova & Hinnebusch (2003) Genes & Dev 17, 859-872; Kubota et al (2003) J Biol Chem 278, 20457). Inhibition of mTOR signalling inhibits the proliferation of cancer cell lines (Noh et al (2004) Clinical Cancer Research 10, 1013-1023; Yu et al (2001) Endocrine-Related Cancer 8, 249-258), and has been proposed as a target for cancer therapy (Huang & Houghton (2003) Curr Opin Pharmacol 3, 371-377).

However, there is still a need for compounds capable of inhibiting the uncontrolled growth of cancer cells.

SUMMARY OF THE INVENTION

Thus, one aspect of the present invention relates to the use of a compound of the general formula (I) as defined herein for preparation of a medicament for the treatment of cancer in a mammal, cf. claim 1.

Another aspect of the present invention relates to a compound as defined herein for use as a medicament, with the proviso that the compound is not one selected from 3,3-bis-(4-hydroxy-phenyl)-1,3-dihydro-indol-2-one and acetic acid 4-[3-(4-acetoxy-phenyl)-2-oxo-2,3-dihydro-1H-indol-3-yl]-phenyl ester.

A further aspect of the present invention relates to a novel compound of the general formula (I) or (II), cf. claims 55 and 56.

A still further aspect of the present invention relates to a pharmaceutical composition, cf. claim 57.

A even further aspect of the present invention relates to a method of treating a mammal suffering from or being susceptible to cancer, cf. claim 64.

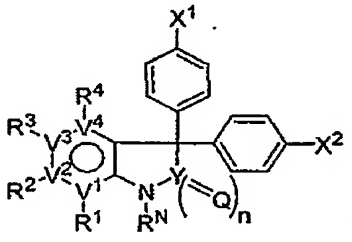
DETAILED DESCRIPTION OF THE INVENTION

Compounds for the treatment of cancer in a mammal

One aspect of the present invention relates to particular compounds for the preparation of a medicament for the treatment of cancer in a mammal.

The term cancer is typically describing cell growth not under strict control. In one embodiment of the invention, treatment of cancers in which inhibition of protein synthesis and/or inhibition of activation of the mTOR pathway is an effective method for reducing cell growth. Examples of such cancers are breast cancer, renal cancer, multiple myeloma, leucemia, glia blastoma, rhabdomyosarcoma, prostate, soft tissue sarcoma, colorectal sarcoma, gastric carcinoma, head and neck squamous cell carcinoma, uterine, cervical, melanoma, lymphoma, and pancreatic cancer.

The useful compounds have the general formula (I), namely



(I)

wherein

V^1, V^2, V^3, and V^4 independently are selected from a carbon atom, a non-quaternary nitrogen atom, an oxygen atom, and a sulfur atom, and where V^4 further may be selected from a bond, so that $-V^1-V^2-V^3-V^4-$ together with the atoms to which V^1 and V^4 are attached form an aromatic or heteroaromatic ring;

R^1, R^2, R^3, and R^4, when attached to a carbon atom, independently are selected from hydrogen, optionally substituted C_{1-6}-alkyl, optionally substituted C_{2-6}-alkenyl, hydroxy, optionally substituted C_{1-6}-alkoxy, optionally substituted C_{2-6}-alkenyloxy, carboxy, optionally substituted C_{1-6}-alkoxycarbonyl, optionally substituted C_{1-6}-alkylcarbonyl, optionally substituted C_{1-6}-alkylcarbonyloxy, formyl, amino, mono- and di(C_{1-6}-alkyl)amino, carbamoyl, mono- and di(C_{1-6}-alkyl)aminocarbonyl, C_{1-6}-alkylcarbonylamino, C_{1-6}-alkylsulphonylamino, cyano, carbamido, mono- and di(C_{1-6}-alkyl)aminocarbonylamino, C_{1-6}-alkanoyloxy, C_{1-6}-alkylsulphonyl, C_{1-6}-alkylsulphinyl, aminosulfonyl, mono- and di(C_{1-6}-alkyl)aminosulfonyl, nitro, optionally substituted C_{1-6}-alkylthio, aryl, aryloxy, arylcarbonyl, arylamino, heterocyclyl, heterocyclyloxy, heterocyclylamino, heterocyclylcarbonyl, heteroaryl, heteroaryloxy, heteroarylamino, heteroarylcarbonyl, and halogen, where any C_{1-6}-alkyl as an amino substituent is optionally substituted with hydroxy, C_{1-6}-alkoxy, amino, mono- and di(C_{1-6}-alkyl)amino, carboxy, C_{1-6}-alkylcarbonylamino, C_{1-6}-alkylaminocarbonyl, or halogen(s), and wherein any aryl, heterocyclyl and heteroaryl may be optionally substituted;

R^1, R^2, R^3, and R^4, when attached to a nitrogen atom, independently are selected from hydrogen, optionally substituted C_{1-6}-alkyl, hydroxy, optionally substituted C_{1-6}-alkoxy, optionally substituted C_{1-6}-alkoxycarbonyl, optionally substituted C_{1-6}-alkylcarbonyl, formyl, mono- and di(C_{1-6}-alkyl)aminocarbonyl, amino, C_{1-6}-alkylcarbonylamino, mono- and di(C_{1-6}-alkyl)amino, C_{1-6}-alkylsulphonyl, C_{1-6}-alkylsulphinyl, aryl, aryloxy, arylcarbonyl, arylamino, heterocyclyl, heterocyclyloxy, heterocyclylcarbonyl, heterocyclylamino, heteroaryl, heteroaryloxy, heteroarylcarbonyl, and heteroarylamino; where any C_{1-6}-alkyl as an amino substituent is optionally substituted with hydroxy, C_{1-6}-alkoxy, amino, mono- and di(C_{1-6}-alkyl)amino, carboxy, C_{1-6}-alkylcarbonylamino, C_{1-6}-alkylaminocarbonyl, or halogen(s), and wherein any aryl, heterocyclyl and heteroaryl may be optionally substituted;

or R^1 and R^2 together with the carbon atoms to which they are attached form a ring, e.g. an aromatic ring, a carbocyclic ring, a heterocyclic ring or a heteroaromatic ring, in particular an aromatic ring, a heterocyclic ring or a heteroaromatic ring;

X^1 and X^2 are independently selected from halogen, hydroxy, optionally substituted C_{1-6}-alkoxy, optionally substituted C_{1-6}-alkylcarbonyloxy, amino, mono- and di(C_{1-6}-alkyl)amino, C_{1-6}-alkylcarbonylamino, C_{1-6}-alkylsulphonylamino, mono- and di(C_{1-6}-alkyl)amino-carbonylamino, C_{1-6}-alkanoyloxy, mercapto, optionally substituted C_{1-6}-alkylthio, C_{1-6}-alkylsulfonyl, mono- and di(C_{1-6}-alkyl)aminosulfonyl, aryloxy, arylamino, heterocyclyloxy, heterocyclylamino, heteroaryloxy and heteroarylamino, where any C_{1-6}-alkyl as an amino or sulphur substituent is optionally substituted with hydroxy, C_{1-6}-alkoxy, amino, mono- and di(C_{1-6}-alkyl)amino, carboxy, C_{1-6}-alkylcarbonylamino, C_{1-6}-alkylaminocarbonyl, or halogen(s), and wherein any aryl, heterocyclyl and heteroaryl may be optionally substituted;

$>Y(=Q)_n$ is selected from >C=O, >C=S, >S=O and $>S(=O)_2$; and

R^N is selected from the group consisting of hydrogen, optionally substituted C_{1-6}-alkyl, hydroxy, optionally substituted C_{1-6}-alkoxy, optionally substituted C_{1-6}-alkoxycarbonyl, optionally substituted C_{1-6}-alkylcarbonyl, formyl, mono- and di(C_{1-6}-alkyl)aminocarbonyl, amino, C_{1-6}-alkylcarbonylamino, mono- and di(C_{1-6}-alkyl)amino, C_{1-6}-alkylsulphonyl, and C_{1-6}-alkylsulphinyl; where any C_{1-6}-alkyl as an amino substituent is optionally substituted with hydroxy, C_{1-6}-alkoxy, amino, mono- and di(C_{1-6}-alkyl)amino, carboxy, C_{1-6}-alkylcarbonylamino, C_{1-6}-alkylaminocarbonyl, or halogen(s).

Also included in the class of compounds of the formula (I) are pharmaceutically acceptable salts and prodrugs thereof.

One variant of the compounds of the formula (I) are those wherein each of the benzene rings to which X^1 and X^2 are attached further may be substituted with one, two, three or four fluoro atoms, in particular each benzene ring to which X^1 and X^2 are attached are substituted with two fluoro atoms in the ortho positions relative to the substituents X^1 and X^2, respectively.

Definitions

In the present context, the term "C_{1-6}-alkyl" is intended to mean a linear, cyclic or branched hydrocarbon group having 1 to 6 carbon atoms, such as methyl, ethyl, propyl, *iso*-propyl, pentyl, cyclopentyl, hexyl, cyclohexyl, and the term "C_{1-4}-alkyl" is intended to cover linear, cyclic or branched hydrocarbon groups having 1 to 4 carbon atoms, e.g. methyl, ethyl, propyl, *iso*-propyl, cyclopropyl, butyl, *iso*-butyl, *tert*-butyl, cyclobutyl.

Similarly, the term "C_{2-6}-alkenyl" is intended to cover linear, cyclic or branched hydrocarbon groups having 2 to 6 carbon atoms and comprising one unsaturated bond. Examples of alkenyl groups are vinyl, allyl, butenyl, pentenyl, hexenyl, heptenyl, octenyl, heptadecaenyl. Preferred examples of alkenyl are vinyl, allyl, butenyl, especially allyl.

In the present context, i.e. in connection with the terms "alkyl", "alkoxy", and "alkenyl", the term "optionally substituted" is intended to mean that the group in question may be substituted one or several times, preferably 1-3 times, with group(s) selected from hydroxy (which when bound to an unsaturated carbon atom may be present in the tautomeric keto form), C_{1-6}-alkoxy (i.e. C_{1-6}-alkyl-oxy), C_{2-6}-alkenyloxy, carboxy, oxo (forming a keto or aldehyde functionality), C_{1-6}-alkoxycarbonyl, C_{1-6}-alkylcarbonyl, formyl, aryl, aryloxy, arylamino, arylcarbonyl, aryloxycarbonyl, arylcarbonyloxy, arylaminocarbonyl, arylcarbonylamino, heteroaryl, heteroaryloxy, heteroarylamino, heteroarylcarbonyl, heteroaryloxycarbonyl, heteroarylcarbonyloxy, heteroarylaminocarbonyl, heteroarylcarbonylamino, heterocyclyl, heterocyclyloxy, heterocyclylamino, heterocyclylcarbonyl, heterocyclyloxycarbonyl, heterocyclylcarbonyloxy, heterocyclylaminocarbonyl, heterocyclylcarbonylamino, amino, mono- and di(C_{1-6}-alkyl)amino, carbamoyl, mono- and di(C_{1-6}-alkyl)aminocarbonyl, C_{1-6}-alkylcarbonylamino, cyano, guanidino, carbamido, C_{1-6}-alkyl-sulphonyl-amino, aryl-sulphonyl-amino, heteroaryl-sulphonyl-amino, C_{1-6}-alkanoyloxy, C_{1-6}-alkyl-sulphonyl, C_{1-6}-alkyl-sulphinyl, C_{1-6}-alkylsulphonyloxy, nitro, C_{1-6}-alkylthio, and halogen, where any aryl, heteroaryl and heterocyclyl may be substituted as specifically described below for aryl, heteroaryl and heterocyclyl, and any alkyl, alkoxy, and the like, representing substituents may be substituted with hydroxy, C_{1-6}-alkoxy, amino, mono- and di(C_{1-6}-alkyl)amino, carboxy, C_{1-6}-alkylcarbonylamino, C_{1-6}-alkylaminocarbonyl, or halogen(s).

Typically, the substituents are selected from hydroxy (which when bound to an unsaturated carbon atom may be present in the tautomeric keto form), C_{1-6}-alkoxy (i.e. C_{1-6}-alkyl-oxy), C_{2-6}-alkenyloxy, carboxy, oxo (forming a keto or aldehyde functionality), C_{1-6}-alkylcarbonyl, formyl, aryl, aryloxy, arylamino, arylcarbonyl, heteroaryl, heteroaryloxy, heteroarylamino, heteroarylcarbonyl, heterocyclyl, heterocyclyloxy, heterocyclylamino, heterocyclylcarbonyl, amino, mono- and di(C_{1-6}-alkyl)amino; carbamoyl, mono- and di(C_{1-6}-alkyl)aminocarbonyl, amino-C_{1-6}-alkyl-aminocarbonyl, mono- and di(C_{1-6}-alkyl)amino-C_{1-6}-alkyl-aminocarbonyl, C_{1-6}-alkylcarbonylamino, guanidino, carbamido, C_{1-6}-alkyl-sulphonyl-amino, C_{1-6}-alkyl-sulphonyl, C_{1-6}-alkyl-sulphinyl, C_{1-6}-alkylthio, halogen, where any aryl, heteroaryl and heterocyclyl may be substituted as specifically described below for aryl, heteroaryl and heterocyclyl.

In some embodiments, substituents are selected from hydroxy, C_{1-6}-alkoxy, amino, mono- and di(C_{1-6}-alkyl)amino, carboxy, C_{1-6}-alkylcarbonylamino, C_{1-6}-alkylaminocarbonyl, or halogen.

The term "Halogen" includes fluoro, chloro, bromo, and iodo.

In the present context, the term "aryl" is intended to mean a fully or partially aromatic carbocyclic ring or ring system, such as phenyl, naphthyl, 1,2,3,4-tetrahydronaphthyl, anthracyl, phenanthracyl, pyrenyl, benzopyrenyl, fluorenyl and xanthenyl, among which phenyl is a preferred example.

The term "heteroaryl" is intended to mean a fully or partially aromatic carbocyclic ring or ring system where one or more of the carbon atoms have been replaced with heteroatoms, e.g. nitrogen (=N- or -NH-), sulphur, and/or oxygen atoms. Examples of such heteroaryl groups are oxazolyl, isoxazolyl, thiazolyl, isothiazolyl, pyrrolyl, imidazolyl, pyrazolyl, pyridinyl, pyrimidinyl, pyrazinyl, pyridazinyl, triazinyl, coumaryl, furanyl, thienyl, quinolyl, benzothiazolyl, benzotriazolyl, benzodiazolyl, benzooxozolyl, phthalazinyl, phthalanyl, triazolyl, tetrazolyl, isoquinolyl, acridinyl, carbazolyl, dibenzazepinyl, indolyl, benzopyrazolyl, phenoxazonyl. Particularly interesting heteroaryl groups are benzimidazolyl, oxazolyl, isoxazolyl, thiazolyl, isothiazolyl, pyrrolyl, imidazolyl, pyrazolyl, pyridinyl, pyrimidinyl, pyrazinyl, pyridazinyl, furyl, thienyl, quinolyl, triazolyl, tetrazolyl, isoquinolyl, indolyl in particular benzimidazolyl, pyrrolyl, imidazolyl, pyridinyl, pyrimidinyl, furyl, thienyl, quinolyl, tetrazolyl, and isoquinolyl.

The term "heterocyclyl" is intended to mean a non-aromatic carbocyclic ring or ring system where one or more of the carbon atoms have been replaced with heteroatoms, e.g. nitrogen (=N- or -NH-), sulphur, and/or oxygen atoms. Examples of such heterocyclyl groups (named according to the rings) are imidazolidine, piperazine, hexahydropyridazine, hexahydropyrimidine, diazepane, diazocane, pyrrolidine, piperidine, azepane, azocane, aziridine, azirine, azetidine, pyroline, tropane, oxazinane (morpholine), azepine, dihydroazepine, tetrahydroazepine, and hexahydroazepine, oxazolane, oxazepane, oxazocane, thiazolane, thiazinane, thiazepane, thiazocane, oxazetane, diazetane, thiazetane, tetrahydrofuran, tetrahydropyran, oxepane, tetrahydrothiophene, tetrahydrothiopyrane, thiepane, dithiane, dithiepane, dioxane, dioxepane, oxathiane, oxathiepane. The most interesting examples are tetrahydrofuran, imidazolidine, piperazine, hexahydropyridazine, hexahydropyrimidine, diazepane, diazocane, pyrrolidine, piperidine, azepane, azocane, azetidine, tropane, oxazinane (morpholine), oxazolane, oxazepane, thiazolane, thiazinane, and thiazepane, in particular tetrahydrofuran, imidazolidine, piperazine, hexahydropyridazine, hexahydropyrimidine, diazepane, pyrrolidine, piperidine, azepane, oxazinane (morpholine), and thiazinane.

In the present context, i.e. in connection with the terms "aryl", "heteroaryl", "heterocyclyl" and the like (e.g. "aryloxy", "heterarylcarbonyl", etc.), the term "optionally substituted" is intended to mean that the group in question may be substituted one or several times,

preferably 1-5 times, in particular 1-3 times, with group(s) selected from hydroxy (which when present in an enol system may be represented in the tautomeric keto form), C_{1-6}-alkyl, C_{1-6}-alkoxy, C_{2-6}-alkenyloxy, oxo (which may be represented in the tautomeric enol form), carboxy, C_{1-6}-alkoxycarbonyl, C_{1-6}-alkylcarbonyl, formyl, aryl, aryloxy, arylamino, aryloxy-carbonyl, arylcarbonyl, heteroaryl, heteroarylamino, amino, mono- and di(C_{1-6}-alkyl)amino; carbamoyl, mono- and di(C_{1-6}-alkyl)aminocarbonyl, amino-C_{1-6}-alkyl-aminocarbonyl, mono- and di(C_{1-6}-alkyl)amino-C_{1-6}-alkyl-aminocarbonyl, C_{1-6}-alkylcarbonylamino, cyano, guanidino, carbamido, C_{1-6}-alkanoyloxy, C_{1-6}-alkyl-sulphonyl-amino, aryl-sulphonyl-amino, heteroaryl-sulphonyl-amino, C_{1-6}-alkyl-suphonyl, C_{1-6}-alkyl-sulphinyl, C_{1-6}-alkylsulphonyloxy, nitro, sulphanyl, amino, amino-sulfonyl, mono- and di(C_{1-6}-alkyl)amino-sulfonyl, dihalogen-C_{1-4}-alkyl, trihalogen-C_{1-4}-alkyl, halogen, where aryl and heteroaryl representing substituents may be substituted 1-3 times with C_{1-4}-alkyl, C_{1-4}-alkoxy, nitro, cyano, amino or halogen, and any alkyl, alkoxy, and the like, representing substituents may be substituted with hydroxy, C_{1-6}-alkoxy, C_{2-6}-alkenyloxy, amino, mono- and di(C_{1-6}-alkyl)amino, carboxy, C_{1-6}-alkyl-carbonylamino, halogen, C_{1-6}-alkylthio, C_{1-6}-alkyl-sulphonyl-amino, or guanidino.

Typically, the substituents are selected from hydroxy, C_{1-6}-alkyl, C_{1-6}-alkoxy, oxo (which may be represented in the tautomeric enol form), carboxy, C_{1-6}-alkylcarbonyl, formyl, amino, mono- and di(C_{1-6}-alkyl)amino; carbamoyl, mono- and di(C_{1-6}-alkyl)aminocarbonyl, amino-C_{1-6}-alkyl-aminocarbonyl, C_{1-6}-alkylcarbonylamino, guanidino, carbamido, C_{1-6}-alkyl-sulphonyl-amino, aryl-sulphonyl-amino, heteroaryl-sulphonyl-amino, C_{1-6}-alkyl-suphonyl, C_{1-6}-alkyl-sulphinyl, C_{1-6}-alkylsulphonyloxy, sulphanyl, amino, amino-sulfonyl, mono- and di(C_{1-6}-alkyl)amino-sulfonyl or halogen, where any alkyl, alkoxy and the like, representing substituents may be substituted with hydroxy, C_{1-6}-alkoxy, C_{2-6}-alkenyloxy, amino, mono- and di(C_{1-6}-alkyl)amino, carboxy, C_{1-6}-alkylcarbonylamino, halogen, C_{1-6}-alkylthio, C_{1-6}-alkyl-sulphonyl-amino, or guanidino. In some embodiments, the substituents are selected from C_{1-6}-alkyl, C_{1-6}-alkoxy, amino, mono- and di(C_{1-6}-alkyl)amino, sulphanyl, carboxy or halogen, where any alkyl, alkoxy and the like, representing substituents may be substituted with hydroxy, C_{1-6}-alkoxy, C_{2-6}-alkenyloxy, amino, mono- and di(C_{1-6}-alkyl)amino, carboxy, C_{1-6}-alkylcarbonylamino, halogen, C_{1-6}-alkylthio, C_{1-6}-alkyl-sulphonyl-amino, or guanidino.

The term "prodrug" used herein is intended to mean a derivative of a compound of the formula (I) which – upon exposure to physiological conditions – will liberate a compound of the formula (I) which then will be able to exhibit the desired biological action. Examples of prodrugs are esters (carboxylic acid ester, phosphate esters, sulphuric acid esters, etc.), acid labile ethers, acetals, ketals, etc.

The term "pharmaceutically acceptable salts" is intended to include acid addition salts and basic salts. Illustrative examples of acid addition salts are pharmaceutically acceptable salts

formed with non-toxic acids. Exemplary of such organic salts are those with maleic, fumaric, benzoic, ascorbic, succinic, oxalic, bis-methylenesalicylic, methanesulfonic, ethanedisulfonic, acetic, propionic, tartaric, salicylic, citric, gluconic, lactic, malic, mandelic, cinnamic, citraconic, aspartic, stearic, palmitic, itaconic, glycolic, p-aminobenzoic, glutamic, benzenesulfonic, and theophylline acetic acids, as well as the 8-halotheophyllines, for example 8-bromotheophylline. Exemplary of such inorganic salts are those with hydrochloric, hydrobromic, sulfuric, sulfamic, phosphoric, and nitric acids. Examples of basic salts are salts where the (remaining) counter ion is selected from alkali metals, such as sodium and potassium, alkaline earth metals, such as calcium, and ammonium ions ($^{+}N(R)_3R'$, where R and R' independently designates optionally substituted C_{1-6}-alkyl, optionally substituted C_{2-6}-alkenyl, optionally substituted aryl, or optionally substituted heteroaryl). Pharmaceutically acceptable salts are, e.g., those described in Remington's Pharmaceutical Sciences, 17. Ed. Alfonso R. Gennaro (Ed.), Mack Publishing Company, Easton, PA, U.S.A., 1985 and more recent editions and in Encyclopedia of Pharmaceutical Technology. Thus, the term "an acid addition salt or a basic salt thereof" used herein is intended to comprise such salts. Furthermore, the compounds as well as any intermediates or starting materials may also be present in hydrate form.

Embodiments

The function of V^1, V^2, V^3, and V^4 is mainly to be of sterical character, i.e. determinative for the orientation of the groups R^1-R^4. It is, however, also believed that heteroatoms as one or more of V^1, V^2, V^3, and V^4 may create dipole interactions with other entities and thereby have influence on, e.g., the solubility of the compounds of the general formula (I).

V^1, V^2, V^3, and V^4 are independently selected from a carbon atom, a non-quaternary nitrogen atom, an oxygen atom, and a sulfur atom, and where V^4 further may be selected from a bond, so that $-V^1-V^2-V^3-V^4-$ together with the atoms to which V^1 and V^4 are attached form an aromatic or heteroaromatic ring. Particularly useful examples of such aromatic rings and heteroaromatic rings are those selected from a benzene ring, a thiophene ring (V^1=S, V^2=V^3=C(-) and V^4=bond; V^2=S, V^1=V^3=C(-) and V^4=bond; or V^3=S, V^1=V^2=C(-) and V^4=bond), a furan ring (V^1=O, V^2=V^3=C(-) and V^4=bond; V^2=O, V^1=V^3=C(-) and V^4=bond; or V^3=O, V^1=V^2=C(-) and V^4=bond), a pyrazole ring (V^1=N(-), V^2=N, V^3=C(-) and V^4=bond; V^1=N, V^2=N(-), V^3=C(-) and V^4=bond), an imidazole ring (V^1=N(-), V^2=C(-), V^3=N and V^4=bond; V^1=N, V^2=C(-), V^3=N(-) and V^4=bond), a pyridine ring (V^1=N, V^2=V^3=V^4=C(-); V^2=N, V^1=V^3=V^4=C(-); V^3=N, V^1=V^2=V^4=C(-) and V^4=N, V^1=V^2=V^3=C(-)), a pyrimidine ring (V^1=V^3=N, V^2=V^4=C(-); V^2=V^4=N, V^1=V^3=C(-)), pyrazines (V^1=V^4=N, V^2=V^3=C(-)), a pyridazine ring (V^1=V^2=N, V^3=V^4=C(-); V^2=V^3=N, V^1=V^4=C(-); V^3=V^4=N, V^1=V^2=C(-)), a thiazole ring (V^1=N, V^2=C(-), V^3=S, V^4=bond; V^1=S, V^2=C(-), V^3=N, V^4=bond), and an

isothiazole ring (V^1=N, V^2=S, V^3=C(-), V^4=bond; V^1=S, V^2=N, V^3=C(-), V^4=bond; V^1=C(-), V^2=S, V^3=N, V^4=bond; V^1=C(-), V^2=N, V^3=S, V^4=bond).

The meaning of V^1, V^2, V^3 and V^4 for each heteroaromatic ring is merely specified for the purpose of illustrating that various orientations of the heteroatoms are possible. Furthermore, it should be understood that the respective rings carry the substituents R^1, R^2, R^3 and R^4 (where applicable) in accordance with the general formula (I). Thus, specification of "C(-)" and "N(-)" as possible meanings of V^1, V^2, V^3 and V^4 is made for the purpose of describing that the atoms in question carry a substituent (which may be hydrogen): Specification of "N" means that the respective atoms do not carry an "R" substituent, i.e. the corresponding "R" substituent is absent.

In one embodiment, $-V^1-V^2-V^3-V^4-$ together with the atoms to which V^1 and V^4 are attached form a ring selected from a benzene ring, a thiophene ring, a furan ring, a pyrazole ring, an imidazole ring, a pyridine ring, a pyrimidine ring, pyrazines, and a pyridazine ring, in particular from a benzene ring and a pyridine ring where the nitrogen atom represents V^3 (see also the Examples). In accordance with the general formula (I), the respective ring (aromatic or heteroaromatic) carries the substituents R^1-R^4 (where applicable).

The substituents R^1-R^4 (where applicable) are believed to be at least partly responsible for the biological effect, e.g. the ability of the compounds to inhibit cell proliferation in cancer cells.

In one embodiment, R^1, R^2, R^3, and R^4 are, when attached to a carbon atom, independently selected from hydrogen, optionally substituted C_{1-6}-alkyl, optionally substituted C_{2-6}-alkenyl, hydroxy, optionally substituted C_{1-6}-alkoxy, optionally substituted C_{2-6}-alkenyloxy, carboxy, optionally substituted C_{1-6}-alkoxycarbonyl, optionally substituted C_{1-6}-alkylcarbonyl, optionally substituted C_{1-6}-alkylcarbonyloxy, formyl, amino, mono- and di(C_{1-6}-alkyl)amino, carbamoyl, *mono- and di(C_{1-6}-alkyl)aminocarbonyl*, C_{1-6}-alkylcarbonylamino, C_{1-6}-alkylsulphonylamino, cyano, carbamido, mono- and di(C_{1-6}-alkyl)aminocarbonylamino, C_{1-6}-alkanoyloxy, C_{1-6}-alkylsulphonyl, C_{1-6}-alkylsulphinyl, aminosulfonyl, mono- and di(C_{1-6}-alkyl)aminosulfonyl, nitro, optionally substituted C_{1-6}-alkylthio, and halogen, where any C_{1-6}-alkyl as an amino substituent is optionally substituted with hydroxy, C_{1-6}-alkoxy, amino, mono- and di(C_{1-6}-alkyl)amino, carboxy, C_{1-6}-alkylcarbonylamino, C_{1-6}-alkylaminocarbonyl, or halogen(s); and R^1, R^2, R^3, and R^4 are, when attached to a nitrogen atom, independently selected from hydrogen, optionally substituted C_{1-6}-alkyl, hydroxy, optionally substituted C_{1-6}-alkoxy, optionally substituted C_{1-6}-alkoxycarbonyl, optionally substituted C_{1-6}-alkylcarbonyl, formyl, mono- and di(C_{1-6}-alkyl)aminocarbonyl, amino, C_{1-6}-alkylcarbonylamino, mono- and di(C_{1-6}-alkyl)amino, C_{1-6}-alkylsulphonyl, and C_{1-6}-alkylsulphinyl; where any C_{1-6}-alkyl as an amino substituent is optionally substituted with hydroxy, C_{1-6}-alkoxy, amino, mono- and di(C_{1-6}-

alkyl)amino, carboxy, C_{1-6}-alkylcarbonylamino, C_{1-6}-alkylaminocarbonyl, or halogen(s), and wherein any aryl, heterocyclyl and heteroaryl may be optionally substituted.

More particularly, R^1, R^2, R^3, and R^4 are independently selected from hydrogen, halogen, optionally substituted C_{1-6}-alkyl, hydroxy, optionally substituted C_{1-6}-alkoxy, optionally substituted C_{1-6}-alkoxycarbonyl, optionally substituted C_{1-6}-alkylcarbonyl, amino, C_{1-6}-alkylcarbonylamino, C_{1-6}-alkylcarbonylamino, C_{1-6}-alkylsulphonylamino, mono- and di(C_{1-6}-alkyl)aminosulfonyl, and mono- and di(C_{1-6}-alkyl)amino, where any C_{1-6}-alkyl as an amino substituent is optionally substituted with hydroxy, C_{1-6}-alkoxy, amino, mono- and di(C_{1-6}-alkyl)amino, carboxy, C_{1-6}-alkylcarbonylamino, C_{1-6}-alkylaminocarbonyl, or halogen(s), such as from hydrogen, optionally substituted C_{1-6}-alkyl, hydroxy, optionally substituted C_{1-6}-alkoxy, optionally substituted C_{1-6}-alkoxycarbonyl, optionally substituted C_{1-6}-alkylcarbonyl, amino, C_{1-6}-alkylcarbonylamino, C_{1-6}-alkylcarbonylamino, C_{1-6}-alkylsulphonylamino, mono- and di(C_{1-6}-alkyl)aminosulfonyl, and mono- and di(C_{1-6}-alkyl)amino, where any C_{1-6}-alkyl as an amino substituent is optionally substituted with hydroxy, C_{1-6}-alkoxy, amino, mono- and di(C_{1-6}-alkyl)amino, carboxy, C_{1-6}-alkylcarbonylamino, C_{1-6}-alkylaminocarbonyl, or halogen(s).

As an alternative to the above, R^1 and R^2 may in one embodiment together with the carbon atoms to which they are attached form a heterocyclic ring or a heteroaromatic ring; and in another embodiment, R^1 and R^2 may together with the carbon atoms to which they are attached form an aromatic ring or a carbocyclic ring.

In one particular variant, R^1 is selected from hydrogen, halogen, C_{1-6}-alkyl, trifluoromethyl and C_{1-6}-alkoxy, when V^1 is a carbon atom.

In a further variant, R^2 is selected from hydrogen, halogen, optionally substituted aryl, optionally substituted aryloxy, and optionally substituted heteroaryl, when V^2 is a carbon atom.

In a still further variant, R^3 is selected from hydrogen, optionally substituted C_{1-6}-alkoxy, halogen, cyano, optionally substituted aryl, optionally substituted aryloxy, optionally substituted heteroaryl, amino, C_{1-6}-alkylcarbonylamino, C_{1-6}-alkylsulphonylamino, and mono- and di(C_{1-6}-alkyl)aminosulfonyl, when V^3 is a carbon atom.

In an even still further variant, R^4 is hydrogen, when V^4 is a carbon atom.

It is currently believed that the substituents X^1 and X^2 must include a heteroatom directly bound to the phenyl ring, cf. the definition further above.

In one embodiment, X^1 and X^2 are independently selected from hydroxy, optionally substituted C_{1-6}-alkoxy, optionally substituted C_{1-6}-alkylcarbonyloxy, amino, mono- and di(C_{1-6}-alkyl)amino, C_{1-6}-alkylcarbonylamino, C_{1-6}-alkylsulphonylamino, mono- and di(C_{1-6}-alkyl)aminocarbonylamino, C_{1-6}-alkanoyloxy, and mono- and di(C_{1-6}-alkyl)aminosulfonyl, where any C_{1-6}-alkyl as an amino substituent is optionally substituted with hydroxy, C_{1-6}-alkoxy, amino, mono- and di(C_{1-6}-alkyl)amino, carboxy, C_{1-6}-alkylcarbonylamino, C_{1-6}-alkylaminocarbonyl, or halogen(s).

In a more preferred embodiment, X^1 and X^2 independently are selected from halogen, OR^6, $OCOR^5$, $N(R^6)_2$, $NHCOR^5$, $NHSO_2R^5$, and $NHCON(R^6)_2$, wherein R^5 is selected from C_{1-6}-alkyl, optionally substituted aryl and optionally substituted heteroaryl, and each R^6 independently is selected from hydrogen, C_{1-6}-alkyl, optionally substituted aryl and optionally substituted heteroaryl, such as from OR^6, $OCOR^5$, $N(R^6)_2$, $NHCOR^5$, $NHSO_2R^5$, and $NHCON(R^6)_2$, wherein R^5 is selected from C_{1-6}-alkyl, optionally substituted aryl and optionally substituted heteroaryl, and each R^6 independently is selected from hydrogen, C_{1-6}-alkyl, optionally substituted aryl and optionally substituted heteroaryl, in particular X^1 and X^2 are independently selected from halogen, hydroxy, OAc, NH_2, NMe_2, NHAc, $NHSO_2Me$ and $NHCONMe_2$, such as from hydroxy, OAc, NH_2, NMe_2, NHAc, $NHSO_2Me$ and $NHCONMe_2$.

This being said, it is currently believed that X^1 and X^2 may be the same for both phenyl rings, i.e. $X^1=X^2$. This has the advantage that achiral compounds are achieved. In the pharmaceutical business, use of chiral drugs typically requires isolation of the individual stereoisomeric forms. Another advantage is seen in the synthesis route. A one-step introduction of the two PhX groups saves at least one synthesis step and associated time, and increases the overall yield of the preparation process.

Although not specified in the general formula (I), it is believed that introduction of fluoro atoms in the benzene rings may provide certain advantages. Thus as defined above, a variant of compounds are those wherein each of the benzene rings to which X^1 and X^2 are attached further may be substituted with one, two, three or four fluoro atoms, in particular each benzene ring to which X^1 and X^2 are attached are substituted with two fluoro atoms in the ortho positions relative to the substituents X^1 and X^2, respectively.

The structural element $>Y(=Q)_n$ is not considered particularly critical. However, for synthetic reasons, it is preferred that Y is a carbon atom and Q is an oxygen atom, i.e. $>Y(=Q)_n$ is $>C=O$. In the alternative, Y is a sulfur atom, n is 2, and each Q is an oxygen atom, i.e. $>Y(=Q)_n$ is $>S(=O)_2$.

It is believed that R^N may be selected from a wide variety of substituents. However, it is currently believed that it may be advantageous if R^N is selected from hydrogen, C_{1-6}-alkyl,

amino, and C_{1-6}-alkylcarbonylamino. Most preferred is the embodiments wherein R^N is hydrogen (see Table 1).

In view of the above, and in view of the current set of biological data, it is postulated that certain subclasses of compounds may exhibit particular advantages, cf. the subclasses defined in the following:

One subclass of compounds are those wherein V^1, V^2, V^3, V^4 all are a carbon atom, $>Y(=Q)_n$ is $>C=O$, and R^N is hydrogen.

In one embodiment hereof, R^4 is hydrogen; in particular, both of R^3 and R^4 are hydrogen.

In another embodiment within the subclass, R^1 is C_{1-4}-alkyl and R^2 is halogen, e.g. R^1 is methyl and R^2 is chloro.

In an alternative embodiment within this subclass, R^1 and R^2 together with the carbon atoms to which they are attached form a ring, e.g. an aromatic ring, a carbocyclic ring, a heterocyclic ring or a heteroaromatic ring, in particular an aromatic ring or a carbocyclic ring.

In another embodiment series, R^1, R^2 and R^4 all are hydrogen.

In a further embodiment within this subclass which may be combined with the above embodiment, R^3 is selected from hydrogen, halogen (such as fluoro, chloro, bromo, iodo), nitro, C_{1-4}-alkyl (such as methyl), C_{1-4}-alkoxy (such as methoxy), trifluoromethoxy, amino, carboxy, and dimethylaminocarbonyl, in particular hydrogen, halogen (such as fluoro, chloro, bromo, iodo), nitro, methyl, methoxy, and amino.

In still another embodiment series, R^2, R^3 and R^4 all are hydrogen.

In a further embodiment within this subclass which may be combined with the above embodiment, R^1 is selected from fluoro, chloro, bromo, C_{1-4}-alkyl (such as methyl or tert-butyl), trifluoromethyl, C_{1-4}-alkoxy (such as methoxy), and dimethylaminocarbonyl.

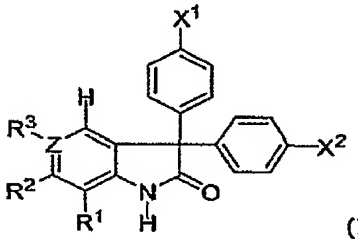
In still another embodiment series, R^1 is selected from halogen (such as fluoro, chloro, bromo), C_{1-4}-alkyl (such as methyl or tert-butyl), trifluoromethyl, C_{1-4}-alkoxy (such as methoxy), and dimethylaminocarbonyl, R^2 is selected from hydrogen and halogen, and R^3 is selected from hydrogen, halogen, C_{1-4}-alkyl (such as methyl), and amino; where R^2 and R^3 are not both hydrogen.

In a further embodiment, which may be combined with any of the before-mentioned embodiments, each of X^1 and X^2 independently are selected from halogen (such as fluoro) hydroxy, C_{1-4}-alkoxy (such as methoxy), amino, and dimethylamino. Also preferred are the embodiments, wherein X^1 and X^2 are the same.

Another subclass of compounds are those wherein at least one of V^1, V^2, V^3, and V^4 is selected from a non-quaternary nitrogen atom, an oxygen atom, and a sulfur atom, and where V^4 further may be selected from a bond, so that $-V^1-V^2-V^3-V^4-$ together with the atoms to which V^1 and V^4 are attached form a heteroaromatic ring. In this case, the heteroaromatic ring is preferably selected from a pyridine ring and a pyrazole ring.

Within this subclass, it is further preferred that $>Y(=Q)_n$ is $>C=O$ and R^N is hydrogen. Also preferred are the embodiments, wherein X^1 and X^2 are the same.

A further aspect of the invention relates to the use of a 3,3-diphenyl-1,3-dihydro-indol-2-one type compound of the formula (II)



(II)

wherein

R^1 is selected from hydrogen, halogen, C_{1-6}-alkyl, trifluoromethyl and C_{1-6}-alkoxy;

R^2 is selected from hydrogen, halogen, optionally substituted aryl, optionally substituted aryloxy, and optionally substituted heteroaryl;

R^3 is selected from hydrogen, optionally substituted C_{1-6}-alkoxy, halogen, cyano, and optionally substituted aryl, optionally substituted aryloxy, optionally substituted heteroaryl, amino, C_{1-6}-alkylcarbonylamino, C_{1-6}-alkylsulphonylamino, and mono- and di(C_{1-6}-alkyl)aminosulfonyl;

Z is CH or N; and

X^1 and X^2 are independently selected from halogen, OR^6, $OCOR^5$, $N(R^6)_2$, $NHCOR^5$, $NHSO_2R^5$, and $NHCON(R^6)_2$, wherein R^5 is selected from C_{1-6}-alkyl, optionally substituted aryl and optionally substituted heteroaryl, and each R^6 independently is selected from hydrogen, C_{1-6}-alkyl, optionally substituted aryl and optionally substituted heteroaryl; and

pharmaceutically acceptable salts and prodrugs thereof (as defined further above);

for the preparation of a medicament for the treatment of cancer in a mammal.

As above, each of the benzene rings to which X^1 and X^2 are attached further may be substituted with one, two, three or four fluoro atoms, in particular each benzene ring to which X^1 and X^2 are attached are substituted with two fluoro atoms in the ortho positions relative to the substituents X^1 and X^2, respectively.

In one embodiment, X^1 and X^2 are independently selected from OR^6, $OCOR^5$, $N(R^6)_2$, $NHCOR^5$, $NHSO_2R^5$, and $NHCON(R^6)_2$, wherein R^5 is selected from C_{1-6}-alkyl, optionally substituted aryl and optionally substituted heteroaryl, and each R^6 independently is selected from hydrogen, C_{1-6}-alkyl, optionally substituted aryl and optionally substituted heteroaryl.

In one variant, R^1 is selected from C_{1-6}-alkyl and C_{1-6}-alkoxy, such as from methyl, ethyl, isopropyl, methoxy, ethoxy and isopropoxy, in particular from methoxy, ethoxy and isopropoxy, or from methyl, ethyl, and isopropyl.

In another variant, R^2 is selected from hydrogen, chloro, methoxy, dimethylamino, phenyl, phenoxy, optionally substituted thiophen-2-yl, and optionally substituted thiophen-3-yl.

In still another variant, R^3 is selected from hydrogen, methoxy, fluoro, chloro, cyano, phenyl, phenoxy, optionally substituted thiophen-2-yl, and optionally substituted thiophen-3-yl, amino, acetylamino, methylsulfonylamino, and dimethylaminosulfonyl.

In a still further variant, X^1 and X^2 independently are selected from halogen, hydroxy, OAc, NH_2, NMe_2, NHAc, $NHSO_2Me$ and $NHCONMe_2$, such as from hydroxy, OAc, NH_2, NMe_2, NHAc, $NHSO_2Me$ and $NHCONMe_2$.

Each X^1 and X^2 are preferably the same.

Presently very interesting compounds of the formula I are those listed in the following as compounds 1 to 200:

1 5-Amino-6-chloro-3,3-bis-(4-hydroxy-phenyl)-7-methyl-1,3-dihydro-indol-2-one
2 5-Chloro-3,3-bis-(4-hydroxy-phenyl)-7-methyl-1,3-dihydro-indol-2-one
3 5-Fluoro-3,3-bis-(4-hydroxy-phenyl)-1,3-dihydro-indol-2-one
4 3,3-Bis-(4-hydroxy-phenyl)-5-nitro-1,3-dihydro-indol-2-one
5 3,3-Bis-(4-hydroxy-phenyl)-7-methyl-1,3-dihydro-pyrrolo[3,2-c]pyridin-2-one
6 6-Bromo-3,3-bis-(4-hydroxy-phenyl)-1,3-dihydro-pyrrolo[3,2-c]pyridin-2-one
7 6-Bromo-3,3-bis-(4-hydroxy-phenyl)-7-methyl-1,3-dihydro-pyrrolo[3,2-c]pyridin-2-one
8 6-Bromo-3,3-bis-(4-hydroxy-phenyl)-5,7-dimethyl-1,3-dihydro-indol-2-one
9 6-Bromo-3,3-bis-(4-hydroxy-phenyl)-7-methyl-2-oxo-2,3-dihydro-1H-indole-5-carbonitrile
10 6-Bromo-3,3-bis-(4-hydroxy-phenyl)-5-methoxy-7-methyl-1,3-dihydro-indol-2-one
11 6-Bromo-3,3-bis-(4-hydroxy-phenyl)-7-methoxy-1,3-dihydro-pyrrolo[3,2-c]pyridin-2-one;
12 6-Bromo-7-ethyl-3,3-bis-(4-hydroxy-phenyl)-1,3-dihydro-pyrrolo[3,2-c]pyridin-2-one
13 6-Bromo-7-ethyl-3,3-bis-(4-hydroxy-phenyl)-5-methyl-1,3-dihydro-indol-2-one
14 6-Bromo-5-ethyl-3,3-bis-(4-hydroxy-phenyl)-7-methyl-1,3-dihydro-indol-2-one
15 6-Bromo-7-ethyl-3,3-bis-(4-hydroxy-phenyl)-2-oxo-2,3-dihydro-1H-indole-5-carbonitrile
16 6-Bromo-7-ethyl-3,3-bis-(4-hydroxy-phenyl)-5-methoxy-1,3-dihydro-indol-2-one
17 6-Chloro-3,3-bis-(4-hydroxy-phenyl)-1,3-dihydro-pyrrolo[3,2-c]pyridin-2-one
18 6-Chloro-3,3-bis-(4-hydroxy-phenyl)-7-methyl-1,3-dihydro-pyrrolo[3,2-c]pyridin-2-one
19 6-Chloro-3,3-bis-(4-hydroxy-phenyl)-5,7-dimethyl-1,3-dihydro-indol-2-one
20 6-Chloro-3,3-bis-(4-hydroxy-phenyl)-7-methyl-2-oxo-2,3-dihydro-1H-indole-5-carbonitrile
21 6-Chloro-3,3-bis-(4-hydroxy-phenyl)-5-methoxy-7-methyl-1,3-dihydro-indol-2-one
22 6-Chloro-3,3-bis-(4-hydroxy-phenyl)-7-methoxy-1,3-dihydro-pyrrolo[3,2-c]pyridin-2-one
23 6-Chloro-7-ethyl-3,3-bis-(4-hydroxy-phenyl)-1,3-dihydro-pyrrolo[3,2-c]pyridin-2-one
24 6-Chloro-7-ethyl-3,3-bis-(4-hydroxy-phenyl)-5-methyl-1,3-dihydro-indol-2-one
25 6-Chloro-5-ethyl-3,3-bis-(4-hydroxy-phenyl)-7-methyl-1,3-dihydro-indol-2-one
26 6-Chloro-7-ethyl-3,3-bis-(4-hydroxy-phenyl)-2-oxo-2,3-dihydro-1H-indole-5-carbonitrile
27 6-Chloro-7-ethyl-3,3-bis-(4-hydroxy-phenyl)-5-methoxy-1,3-dihydro-indol-2-one
28 6-Chloro-3,3-bis-(4-hydroxy-phenyl)-5-methyl-7-methoxy-1,3-dihydro-indol-2-one;
29 6-Chloro-3,3-bis-(4-hydroxy-phenyl)-7-methoxy-2-oxo-2,3-dihydro-1H-indole-5-carbonitrile;
30 6-Chloro-3,3-bis-(4-hydroxy-phenyl)-7-methoxy-1,3-dihydro-pyrrolo[3,2-c]pyridin-2-one;
31 6-Chloro-3,3-bis-(4-hydroxy-phenyl)-7-methoxy-5-methyl-1,3-dihydro-indol-2-one;
32 6-Chloro-5-ethyl-3,3-bis-(4-hydroxy-phenyl)-7-methoxy-1,3-dihydro-indol-2-one;
33 6-Chloro-3,3-bis-(4-hydroxy-phenyl)-5,7-dimethoxy-1,3-dihydro-indol-2-one;
34 N-{4-[3-(4-Acetylamino-phenyl)-5-chloro-7-methyl-2-oxo-2,3-dihydro-1H-indol-3-yl]-phenyl}-acetamide;
35 N-{4-[5-Chloro-3-(4-methanesulfonylamino-phenyl)-7-methyl-2-oxo-2,3-dihydro-1H-indol-3-yl]-phenyl}-methanesulfonamide
36 N-{4-[3-(4-Acetylamino-phenyl)-6-chloro-7-methyl-2-oxo-2,3-dihydro-1H-indol-3-yl]-phenyl}-acetamide;
37 N-{4-[6-Chloro-3-(4-methanesulfonylamino-phenyl)-7-methyl-2-oxo-2,3-dihydro-1H-indol-3-yl]-phenyl}-methanesulfonamide;
38 N-{4-[3-(4-Acetylamino-phenyl)-5-chloro-7-methoxy-2-oxo-2,3-dihydro-1H-indol-3-yl]-phenyl}-acetamide;
39 N-{4-[5-Chloro-3-(4-methanesulfonylamino-phenyl)-7-methoxy-2-oxo-2,3-dihydro-1H-indol-3-yl]-phenyl}-methanesulfonamide;
40 N-{4-[3-(4-Acetylamino-phenyl)-6-chloro-7-methoxy-2-oxo-2,3-dihydro-1H-indol-3-yl]-phenyl}-acetamide; and
41 N-{4-[6-Chloro-3-(4-methanesulfonylamino-phenyl)-7-methoxy-2-oxo-2,3-dihydro-1H-indol-3-yl]-phenyl}-methanesulfonamide
42 2-Chloro-6,6-bis-(4-hydroxy-phenyl)-3-methyl-4,6-dihydro-3H-pyrrolo[2,3-d]imidazol-5-one
43 Acetic acid 4-[6-(4-acetoxy-phenyl)-2-chloro-3-methyl-5-oxo-3,4,5,6-tetrahydro-pyrrolo[2,3-d]imidazol-6-yl]-phenyl ester
44 6,6-Bis-(4-amino-phenyl)-2-chloro-3-methyl-4,6-dihydro-3H-pyrrolo[2,3-d]imidazol-5-one
45 2-Chloro-6,6-bis-(4-dimethylamino-phenyl)-3-methyl-4,6-dihydro-3H-pyrrolo[2,3-d]imidazol-5-one
46 N-{4-[6-(4-Acetylamino-phenyl)-2-chloro-3-methyl-5-oxo-3,4,5,6-tetrahydro-pyrrolo[2,3-d]imidazol-6-yl]-phenyl}-acetamide
47 N-{4-[2-Chloro-6-(4-methanesulfonylamino-phenyl)-3-methyl-5-oxo-3,4,5,6-tetrahydro-pyrrolo[2,3-d]imidazol-6-yl]-phenyl}-methanesulfonamide
48 4,4-Bis-(4-hydroxy-phenyl)-1-methyl-4,6-dihydro-1H-pyrrolo[2,3-c]pyrazol-5-one
49 Acetic acid 4-[4-(4-acetoxy-phenyl)-1-methyl-5-oxo-1,4,5,6-tetrahydro-pyrrolo[2,3-c]pyrazol-4-yl]-phenyl ester
50 4,4-Bis-(4-amino-phenyl)-1-methyl-4,6-dihydro-1H-pyrrolo[2,3-c]pyrazol-5-one
51 N-{4-[4-(4-Methanesulfonylamino-phenyl)-1-methyl-5-oxo-1,4,5,6-tetrahydro-pyrrolo[2,3-c]pyrazol-4-yl]-phenyl}-methanesulfonamide

52 4,4-Bis-(4-dimethylamino-phenyl)-1-methyl-4,6-dihydro-1H-pyrrolo[2,3-c]pyrazol-5-one
53 N-{4-[4-(4-Acetylamino-phenyl)-1-methyl-5-oxo-1,4,5,6-tetrahydro-pyrrolo[2,3-c]pyrazol-4-yl]-phenyl}-acetamide
54 4,4-Bis-(4-hydroxy-phenyl)-2-methyl-2,6-dihydro-4H-pyrrolo[2,3-c]pyrazol-5-one
55 Acetic acid 4-[4-(4-acetoxy-phenyl)-2-methyl-5-oxo-2,4,5,6-tetrahydro-pyrrolo[2,3-c]pyrazol-4-yl]-phenyl ester
56 4,4-Bis-(4-amino-phenyl)-2-methyl-2,6-dihydro-4H-pyrrolo[2,3-c]pyrazol-5-one
57 4,4-Bis-(4-dimethylamino-phenyl)-2-methyl-2,6-dihydro-4H-pyrrolo[2,3-c]pyrazol-5-one
58 N-{4-[4-(4-Acetylamino-phenyl)-2-methyl-5-oxo-2,4,5,6-tetrahydro-pyrrolo[2,3-c]pyrazol-4-yl]-phenyl}-acetamide
59 N-{4-[4-(4-Methanesulfonylamino-phenyl)-2-methyl-5-oxo-2,4,5,6-tetrahydro-pyrrolo[2,3-c]pyrazol-4-yl]-phenyl}-methanesulfonamide
60 4,4-Bis-(4-hydroxy-phenyl)-4,6-dihydro-thieno[2,3-b]pyrrol-5-one
61 Acetic acid 4-[4-(4-acetoxy-phenyl)-5-oxo-5,6-dihydro-4H-thieno[2,3-b]pyrrol-4-yl]-phenyl ester
62 4,4-Bis-(4-amino-phenyl)-4,6-dihydro-thieno[2,3-b]pyrrol-5-one
63 4,4-Bis-(4-dimethylamino-phenyl)-4,6-dihydro-thieno[2,3-b]pyrrol-5-one
64 N-{4-[4-(4-Acetylamino-phenyl)-5-oxo-5,6-dihydro-4H-thieno[2,3-b]pyrrol-4-yl]-phenyl}-acetamide
65 N-{4-[4-(4-Methanesulfonylamino-phenyl)-5-oxo-5,6-dihydro-4H-thieno[2,3-b]pyrrol-4-yl]-phenyl}-methanesulfonamide
66 2-Chloro-4,4-bis-(4-hydroxy-phenyl)-4,6-dihydro-thieno[2,3-b]pyrrol-5-one
67 Acetic acid 4-[4-(4-acetoxy-phenyl)-2-chloro-5-oxo-5,6-dihydro-4H-thieno[2,3-b]pyrrol-4-yl]-phenyl ester

Method of treatment

A further aspect of the present invention relates to a method of treating a mammal suffering from or being susceptible to cancer, the method comprising administering to the mammal a therapeutically effective amount of a compound defined herein. Conditions with respect to dosage, administration, etc. may be as defined further below.

Biological effects

The present inventors have found that many compounds of general formula (I) are shown to inhibit the proliferation of MDA468 cells at lower concentrations as those required to inhibit proliferation of MDA231 cells. A possible mechanism to explain this finding is the selective inhibition of protein synthesis by compounds of general formula (I) in MDA468 cells compared to MDA231 cells. Our present hypothesis is that compounds of the general formula (I) inhibit protein synthesis by selective inhibition of mTOR pathway activation of translation inhibition.

The selective inhibition of mTOR pathway activation by compounds of the general formula (I) in Western blots correlates with cell proliferation and protein synthesis data. This suggests that detection of mTOR pathway activity by measurement of either p70S6K, 4E-BP1 or S6K phosphorylation status using phosphor-specific or total protein antibodies by Western blot or ELISA, or measurement of p70S6K kinase activity, in patient tumour material or blood samples, may provide a useful method for selecting patients who will respond to compounds of general formula (I). Alternatively, measurement of p70S6K or S6K phosphorylation status using phosphospecific antibodies, or p70S6K kinase activity, in tumour material or blood samples may provide a biomarker useful for determining drug dosing of compounds of the general formula (I) in human clinical trials.

Compounds for medical use

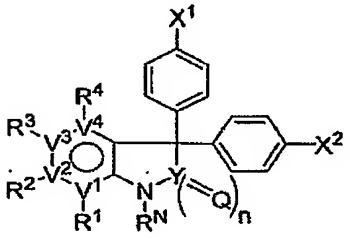
Apart from the more specific medical use outlined above, it is also believed that the majority of the compounds defined herein are generally applicable for medical use.

Thus, in a further aspect the present invention relates to a compound as defined herein for use as a medicament, with the proviso that the compound is not one selected from 3,3-bis-(4-hydroxy-phenyl)-1,3-dihydro-indol-2-one and acetic acid 4-[3-(4-acetoxy-phenyl)-2-oxo-2,3-dihydro-1H-indol-3-yl]-phenyl ester.

Novel compounds

As mentioned in the introductory section, a few compounds according to the general formula (I) have been described in the literature and (unrelated) biological effects have previously been described for some of these compounds.

Thus, a still further aspect of the present invention relates to a compound of the formula (I)



(I)

as defined further above, with the proviso that the compound is not one selected from
3,3-bis-(4-hydroxy-phenyl)-1,3-dihydro-indol-2-one,
3,3-bis-(4-hydroxy-phenyl)-7-methyl-1,3-dihydro-indol-2-one;
3,3-bis-(4-hydroxy-phenyl)-4,5-dimethyl-1,3-dihydro-indol-2-one ;
3,3-bis-(4-hydroxy-phenyl)-5,7-dimethyl-1,3-dihydro-indol-2-one;
5-bromo-3,3-bis-(4-hydroxy-phenyl)-1,3-dihydro-indol-2-one;
5-chloro-3,3-bis-(4-hydroxy-phenyl)-1,3-dihydro-indol-2-one;
3,3-bis-(4-hydroxy-phenyl)-5-methoxy-1,3-dihydro-indol-2-one;
3,3-bis-(4-hydroxy-phenyl)-5-methyl-1,3-dihydro-indol-2-one;
6-chloro-3,3-bis-(4-hydroxy-phenyl)-7-methyl-1,3-dihydro-indol-2-one;
acetic acid 4-[3-(4-acetoxy-phenyl)-2-oxo-2,3-dihydro-1H-indol-3-yl]-phenyl ester; and
acetic acid 4-[3-(4-acetoxy-phenyl)-5-methyl-2-oxo-2,3-dihydro-1H-indol-3-yl]-phenyl ester.

The specification of the compound of the formula (I) and the preferences are as described hereinabove. In particular, preferred compounds of the formula (I) have the formula (II) as defined above.

Preparation of compounds of the formula (I) and the formula (II)

The compounds generally can be synthesized as described in the Examples section.

Formulation of pharmaceutical compositions

The compound of the formula (I) (and the more specific compound of the formula (III)) is suitably formulated in a pharmaceutical composition so as to suit the desirable route of administration.

The administration route of the compounds may be any suitable route which leads to a concentration in the blood or tissue corresponding to a therapeutic effective concentration. Thus, e.g., the following administration routes may be applicable although the invention is not limited thereto: the oral route, the parenteral route, the cutaneous route, the nasal route, the rectal route, the vaginal route and the ocular route. It should be clear to a person skilled in the art that the administration route is dependent on the particular compound in question; particularly the choice of administration route depends on the physico-chemical properties of the compound together with the age and weight of the patient and on the particular disease or condition and the severity of the same.

The compounds may be contained in any appropriate amount in a pharmaceutical composition, and are generally contained in an amount of about 1-95%, e.g. 1-10%, by weight of the total weight of the composition. The composition may be presented in a dosage form which is suitable for the oral, parenteral, rectal, cutaneous, nasal, vaginal and/or ocular administration route. Thus, the composition may be in form of, e.g., tablets, capsules, pills, powders, granulates, suspensions, emulsions, solutions, gels including hydrogels, pastes, ointments, creams, plasters, drenches, delivery devices, suppositories, enemas, injectables, implants, sprays, aerosols and in other suitable form.

The pharmaceutical compositions may be formulated according to conventional pharmaceutical practice, see, e.g., "Remington's Pharmaceutical Sciences" and "Encyclopedia of Pharmaceutical Technology", edited by Swarbrick, J. & J. C. Boylan, Marcel Dekker, Inc., New York, 1988. Typically, the compounds defined herein are formulated with (at least) a pharmaceutically acceptable carrier or excipient. Pharmaceutically acceptable carriers or excipients are those known by the person skilled in the art. Formation of suitable salts of the compounds of the Formula I will also be evident in view of the before-mentioned.

Thus, the present invention provides in a further aspect a pharmaceutical composition comprising a compound of the general Formula I in combination with a pharmaceutically acceptable carrier.

The compound is preferably one of those defined under "Compounds for medical use".

In a particular embodiment, the compound is as defined under "Novel compounds", i.e. novel compounds of the Formula (I) and Formula (II) respectively.

Pharmaceutical compositions according to the present invention may be formulated to release the active compound substantially immediately upon administration or at any substantially predetermined time or time period after administration. The latter type of compositions is generally known as controlled release formulations.

In the present context, the term "controlled release formulation" embraces i) formulations which create a substantially constant concentration of the drug within the body over an extended period of time, ii) formulations which after a predetermined lag time create a substantially constant concentration of the drug within the body over an extended period of time, iii) formulations which sustain drug action during a predetermined time period by maintaining a relatively, constant, effective drug level in the body with concomitant minimization of undesirable side effects associated with fluctuations in the plasma level of the active drug substance (sawtooth kinetic pattern), iv) formulations which attempt to localize drug action by, e.g., spatial placement of a controlled release composition adjacent to or in the diseased tissue or organ, v) formulations which attempt to target drug action by using carriers or chemical derivatives to deliver the drug to a particular target cell type.

Controlled release formulations may also be denoted "sustained release", "prolonged release", "programmed release", "time release", "rate-controlled" and/or "targeted release" formulations.

Controlled release pharmaceutical compositions may be presented in any suitable dosage forms, especially in dosage forms intended for oral, parenteral, cutaneous nasal, rectal, vaginal and/or ocular administration. Examples include single or multiple unit tablet or capsule compositions, oil solutions, suspensions, emulsions, microcapsules, microspheres, nanoparticles, liposomes, delivery devices such as those intended for oral, parenteral, cutaneous, nasal, vaginal or ocular use.

Preparation of solid dosage forms for oral use, controlled release oral dosage forms, fluid liquid compositions, parenteral compositions, controlled release parenteral compositions, rectal compositions, nasal compositions, percutaneous and topical compositions, controlled release percutaneous and topical compositions, and compositions for administration to the eye will be well-known to those skilled in the art of pharmaceutical formulation. Specific formulations can be found in "Remington's Pharmaceutical Sciences".

Capsules, tablets and pills etc. may contain for example the following compounds: microcrystalline cellulose, gum or gelatin as binders; starch or lactose as excipients;

stearates as lubricants; various sweetening or flavouring agents. For capsules the dosage unit may contain a liquid carrier like fatty oils. Likewise coatings of sugar or enteric agents may be part of the dosage unit. The pharmaceutical compositions may also be emulsions of the compound(s) and a lipid forming a micellular emulsion.

For parenteral, subcutaneous, intradermal or topical administration the pharmaceutical composition may include a sterile diluent, buffers, regulators of tonicity and antibacterials. The active compound may be prepared with carriers that protect against degradation or immediate elimination from the body, including implants or microcapsules with controlled release properties. For intravenous administration the preferred carriers are physiological saline or phosphate buffered saline.

Dosages

In one embodiment, the pharmaceutical composition is in unit dosage form. In such embodiments, each unit dosage form typically comprises 0.1-250 mg, such as 0.1-100 mg, e.g. 0.1-50 mg, of the compound.

More generally, the compound are preferably administered in an amount of about 0.1-50 mg per kg body weight per day, such as about 0.5-25 mg per kg body weight per day.

For compositions adapted for oral administration for systemic use, the dosage is normally 2 mg to 1 g per dose administered 1-4 times daily for 1 week to 12 months depending on the disease to be treated.

The dosage for oral administration of the composition in order to prevent diseases or conditions is normally 1 mg to 75 mg per kg body weight per day. The dosage may be administered once or twice daily for a period starting 1 week before the exposure to the disease until 4 weeks after the exposure.

For compositions adapted for rectal use for preventing diseases, a somewhat higher amount of the compound is usually preferred, i.e. from approximately 1 mg to 100 mg per kg body weight per day.

For parenteral administration, a dose of about 0.1 mg to about 50 mg per kg body weight per day is convenient. For intravenous administration, a dose of about 0.1 mg to about 20 mg per kg body weight per day administered for 1 day to 3 months is convenient. For intraarticular administration, a dose of about 0.1 mg to about 20 mg per kg body weight per

day is usually preferable. For parenteral administration in general, a solution in an aqueous medium of 0.5-2% or more of the active ingredients may be employed.

For topical administration on the skin, a dose of about 1 mg to about 5 g administered 1-10 times daily for 1 week to 12 months is usually preferable.

Combination treatment

In an intriguing embodiment of the present invention, the compound of the general formula (I) or the general formula (II) is used therapeutically in combination with one or more other chemotherapeutic agents. Examples of such chemotherapeutic agents are those selected from daunorubicin, docetaxel, prednisone, dexamethasone, decadron, altretamine, amifostine, aminoglutethimide, dactinomycin, anastrozole, asparaginase, bicalutamide, bleomycin, busulfan, carboplatin, carmustine, chlorambucil, chlorodeoxyadenosine, cisplatin, cytosine arabinoside, dacarbazine, doxorubicin, epirubicin, estramustine, diethylstilbestrol, fludarabine, flutamide, 5-fluorouracil, gemcitabine, goserelin, idarubicin, irinotecan, levamisole, lomustine, mechlorathamine, alkeran, mercaptopurine, taxol (e.g. paclitaxel). In particular, the further chemotherapeutic agent is selected from taxanes such as Taxol, Paclitaxel and Docetaxel.

Thus, with respect to the use defined herein, the medicament may further comprise one or more other chemotherapeutic agents.

With respect to the pharmaceutical composition defined herein, such a composition may further comprise one or more other chemotherapeutic agents.

EXAMPLES

Example 1: Procedures for preparation of isatin derivatives

Isatin derivatives used as intermediates can be obtained by either Protocol A or Protocol B.

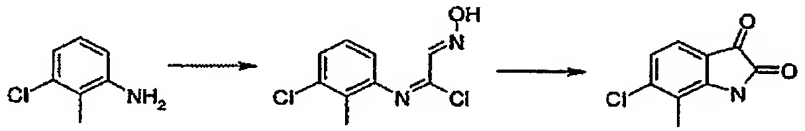
Protocol A, based on literature procedures, was used to generate aromatic isatins with either electron-donating substituents (see Stolle: *J. Prakt. Chem.* (1922), **105**, 137 and Sandmeyer: *Helv. Chim. Acta* (1919), **2**, 234) or a 5-membered electron rich heteroaromatic moiety (see Shvedov et al. (Chem. Heterocycl. Compd. Engl. Transl. (1975), **11**, 666). Examples of preferred 5-membered heterocycles are thiophenes (V^1=S, V^2=V^3=C(-) and V^4=bond; V^2=S, V^1=V^3=C(-) and V^4=bond or V^3=S, V^1=V^2=C(-) and V^4=bond), furans (V^1=O, V^2=V^3=C(-) and V^4=bond; V^2=O, V^1=V^3=C(-) and V^4=bond or V^3=O, V^1=V^2=C(-) and

V^4=bond), pyrazoles (V^1=N(-), V^2=N, V^3=C(-) and V^4=bond; V^1=N, V^2=N(-), V^3=C(-) and V^4=bond) and imidazoles (V^1=N(-), V^2=C(-), V^3=N and V^4=bond; V^1=N, V^2=C(-), V^3=N(-) and V^4=bond).

Protocol B, based on literature procedures, was used to generate aromatic isatins with electron-withdrawing substituents (see Hewawasam and Maenwell: *Tet. Lett.* (1994), **35**, 7303) and 6-membered electron-poor heteroaromatic isatins (see Rivalle and Bisagni: *J. Heterocycl. Chem.* (1997), **34**, 441). Examples of preferred 6-membered heterocycles are pyridines (V^1=N, V^2=V^3=V^4=C(-); V^2=N, V^1=V^3=V^4=C(-); V^3=N, V^1=V^2=V^4=C(-) and V^4=N, V^1=V^2=V^3=C(-)), pyrimidines (V^1=V^3=N, V^2=V^4=C(-); V^2=V^4=N, V^1=V^3=C(-)), pyrazines (V^1=V^4=N, V^2=V^3=C(-)) and pyridazines (V^1=V^2=N, V^3=V^4=C(-); V^2=V^3=N, V^1=V^4=C(-); V^3=V^4=N, V^1=V^2=C(-)).

Other isatins of interest could in addition be prepared using one of the alternative methods published in the literature (see *i.e.* Tatsugi *et al. ARKIVOC* (2001), 67-73 or the review by Silva *et al.* in *J. Braz. Chem. Soc.* (2001), **12**, 273-324).

Protocol A: Preparation of isatin derivatives



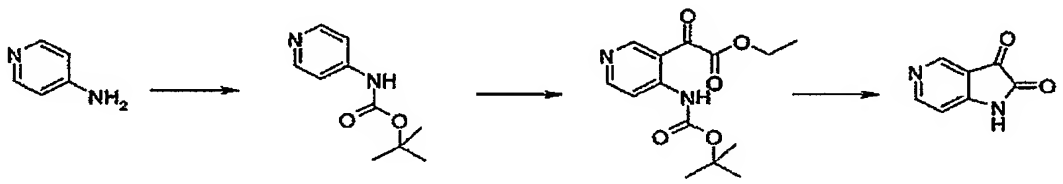
(1) (2)

To a well stirred suspension of sodium sulfate (314.g, 2211 mmol) in water (700 mL) at 60°C were added in sequence hydroxylamine hydrochloride (56 g, 806 mmol), chloral hydrate (47 g, 284 mmol), 2-methyl-3-chloro-aniline (40 g, 283 mmol) in water (500 mL) and finally concentrated hydrochloric acid (12 M, 24.2 ml, 290 mmol). The mixture temperature was risen to 100°C. After 20 minutes, the brown solution was left to cool to room temperature and kept stirring overnight. The solid present was filtered, washed with water (3X), heptane (2X) and dried at 60°C under vacuum for 6 hours. Obtained 62 g of N-(3-Chloro-2-methyl-phenyl)-2-hydroxyimino-acetimidoyl chloride (1) as a beige solid used without further purification. δ_H (400 MHz, DMSO-d6) 12.3 (1 H, s), 9.8 (1 H, s), 7.7 (1 H, s), 7.42 (1 H, d, *J*= 7.8), 7.36 (1 H, d, *J*= 7.6), 7.3 (1 H, m), 2.25 (3 H, s).

To well stirred sulphuric acid (18.3 M, 300 ml) heated at 50°C was added N-(3-Chloro-2-methyl-phenyl)-2-hydroxyimino-acetimidoyl chloride (1) in small portion over 20 minutes (exothermic up to 70°C) (60 g, 282 mmol). After addition was completed, the temperature was risen to 80°C and kept for 20 minutes after which the reaction was left cool to room

temperature. The brown mixture was slowly poured into ice (~500 g) and water (500 mL), diluted with more water (1 L) to yield a brown-orange slurry. The solid was collected by filtration, washed with water (2X) under suction to yield an orange solid. This solid was dissolved in 0.4 M sodium hydroxide (1 L). All insoluble tar was removed by filtration. Concentrated hydrochloric acid (12 M, 70 mL) was added, the resulting brown-orange solid was collected by filtration, washed with water (3X), heptane (2X) and dried at 54°C under vacuum for 6 hours. Obtained 34.5 g (208 mmol, 62%) of 6-Chloro-7-methyl-1H-indole-2,3-dione (2). δ_H (400 MHz, DMSO-d6) 11.3 (1 H, s), 7.4 (1 H, d, *J*=8.0), 7.2 (1 H, d, *J*=8.1), 2.25 (3 H, s).

Protocol B: Preparation of isatin derivatives



To a well stirred solution of Boc anhydride (2.56 g, 11.7 mmol) in THF (10 mL) was added 4-aminopyridine (1.0 g, 10.6 mmol) in portions over 3 minutes while maintaining the temperature between 20°C and 25°C. No more exotherm was observed after 5 minutes. The reaction was then stirred at room temperature for 3.5 hours. After *in vacuo* concentration the crude mixture was then titurated in hexane (20 mL), filtered and washed with more hexane (~5 mL). The resulting solid dried under reduced pressure to yield 1.93 g (9.9 mmol, 94%) of pyridin-4-yl-carbamic acid tert-butyl ester as a white solid and was used without further purification. LCMS (BDS-Hypersil C_{18}, 50 mm X 2.1 mm, 5 µ, 2.5 minutes) m/z 195 $[MH]^+$ @ retension time 0.90 minutes, 100% by UV at 215 nm.

To a stirred solution of pyridin-4-yl-carbamic acid *tert*-butyl ester (0.62 g, 3.09 mmol) in THF (9 mL) cooled to -5°C was slowly added a solution of t-BuLi (1.7M in THF, 5.5 mL, 9.27 mmol) over 17 minutes while maintaining the temperature between -5°C and 1°C. A red brown precipitate resulted and the reaction mixture stirred at 0°C for a further 1.5 hours. The reaction mixture was then cooled back down to -5°C and diethyloxalate (1.3 mL, 9.27 mmol) was added. The reaction was allowed to reach room temperature and then after 2 hours quenched with water (10 mL). After *in vacuo* concentration the resulting mixture was diluted in ethyl acetate (20 mL) and washed with water (10 mL), dried over Na_2SO_4 and concentrated *in vacuo*. Purification by flash column chromatography (30% EtOAc/ Hexane) afforded 0.16 g (0.54 mmol, 17%) of (4-tert-butoxycarbonylamino-pyridin-3-yl)-oxo-acetic acid ethyl ester as a brown oil.

LCMS (BDS-Hypersil C_{18}, 50 mm X 2.1 mm, 5 µ, 2.5 minutes) m/z 295 $[MH]^+$ + H_2O adduct @ retension time 1.07 minute, 96% by UV at 215 nm

(4-tert-Butoxycarbonylamino-pyridin-3-yl)-oxo-acetic acid ethyl ester (0.14 g, 0.476 mmol) was heated at 186°C under 5 mmHg for 25 minutes in a Kugelrohr apparatus. The brown oil darkens and subsequently gives off gases to form a dark green solid. The solid was dissolved in MeOH and concentrated *in vacuo* to yield 0.04 g (0.3 mmol, 56%) of 1H-pyrrolo[3,2-c]pyridine-2,3-dione as a dark solid. The isatin was then taken to the next step without further purification.

Protocol C: Introduction of functional groups on the isatin derivatives

6-Chloro-7-methyl-5-nitro-1H-indole-2,3-dione (4)

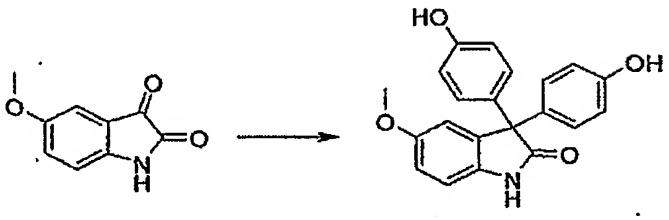
(2) (4)

To a well stirred suspension of 2 (2.0 g, 10.2 mmol) in glacial acetic acid (2 mL) and sulphuric acid (4 mL) cooled in ice/water was added a cold mixture of nitric acid (69%, 1 g, 10.9 mmol) and sulphuric acid (0.7 g, 7.3 mmol) at such a rate to maintain internal temperature below 5°C. After addition was completed reaction mixture was stirred at room temperature for 1 h, then slowly poured over ice (~20 g) and left standing for 10 minutes. The solid formed was collected by filtration, washed with cold water (3X), dried under vacuum overnight to yield 1.92 g (8.0 mmol, 78%) of 6-Chloro-7-methyl-5-nitro-1H-indole-2,3-dione (4) as an orange solid. LCMS m/z 118.79 [Fragment]$^+$ @ R_T 1.14min, 95%

Example 2: Procedures for preparation of the final compounds of the invention

The obtained isatin derivatives were used to generate the final compounds of the invention. Typically, an isatin derivative was heated with a benzene derivative to 100 °C in a mixture of glacial acetic acid and sulphuric acid under nitrogen. Alternatively, the isatin derivative was reacted at room temperature with a benzene derivative in triflic acid under nitrogen (see Klumpp *et al. J. Org. Chem.* (1998), **63**, 4481-84). Thioamide derivatives of the final compounds (Q=S and n=1) were obtained by reacting the corresponding amides (Q=O and n=1) with Lawesson's reagent as described in Organic Synthesis Coll. Vol. VII, p372.

Protocol D: Preparation of the final compounds



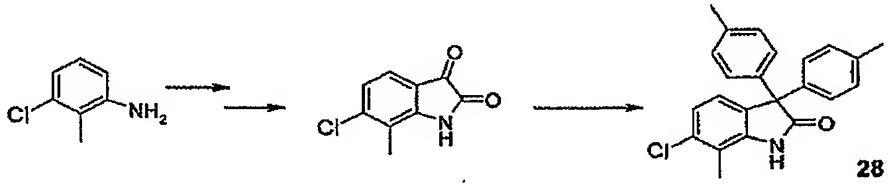
(7)

To a suspension of phenol (0.28 g, 2.9 mmol) and 5-methoxy-1H-indole-2,3-dione (0.24 g (1.3 mmol) in glacial acetic acid (1.5 ml) under nitrogen was added sulphuric acid (18.3 M, 0.145 mL). The mixture was heated at 100°C for 2 hours. Crude reaction mixture was diluted with water and extracted with ethyl acetate (2X). The organic layer was dried (Na_2SO_4) and concentrated under reduced pressure to yield a brown solid. This solid was mixed with DCM: AcOEt (9: 1) (3X) and gave 0.08 g (0.35 mmol, 18%) of 3,3-bis-(4-hydroxy-phenyl)-5-methoxy-1,3-dihydro-indol-2-one (7).

LCMS m/z 348.19 $[M+H]^+$ @ R_T 1.09 min, 100%

δ_H (400 MHz, Methanol-d4) 6.92 (4 H, d, J=8.80 Hz), 6.79 - 6.82 (1 H, m), 6.69 - 6.73 (1 H, m), 6.61 (5 H, m), 3.62 (3 H, s)

Protocol E: Preparation of the final compounds



28

To a well stirred suspension of 6-chloro-7-methyl-1H-indole-2,3-dione (0.15 g, 0.76 mmol) in toluene (anhydrous) (1 mL) was added trifluromethane sulfonic acid (1.25 mL). The tube was sealed and the mixture was stirred at room temperature for 12 hours. The dark brown reaction mixture was then slowly poured over ice (~10 g) and left standing for 10 minutes. The formed precipitate was collected by filtration, washed with cold water (3X 100 mL), dried under vacuum. Purification by flash column chromatography (gradient elution with EtOAc/Heptane (1:9 to 1:1)) followed by recrystallisation (MeOH/EtOAc) gave 25.2 mg (0.07

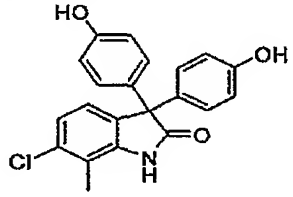
mmol, 9%) of 6-chloro-7-methyl-3,3-di-p-tolyl-1,3-dihydro-indol-2-one (**28**) as a light brown solid.

LCMS (BDS-Hypersil C_{18}, 50 mm X 2.1 mm, 5 µ, 2.5 minutes) m/z major 362.12 $[MH]^+$ and minor 403.17 $[MH+MeCN]^+$ @ retension time 2.18 minutes, 100% by UV at 215 nm.

δ_H (400 MHz, DMSO-d6) 2.24 (6 H, s) 2.28 (3 H, s) 7.00 - 7.03 (5 H, m) 7.05 - 7.12 (5 H, m) 10.96 (1 H, s).

The following compounds were all prepared according to Protocols D or E, unless otherwise specified.

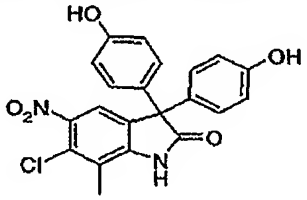
6-Chloro-3,3-bis-(4-hydroxy-phenyl)-7-methyl-1,3-dihydro-indol-2-one (3)(BIC0043901)



LCMS m/z 366.3 $[(Cl^{35})\ M+H]^+$ @ R_T 1.3 min, 100%

δ_H (400 MHz, DMSO-d6) 10.9 (1 H, s), 9.5 (2 H, s), 7.1 (1 H, d, *J*=9.8), 7.05 (1 H, d, *J*=9.6), 6.95 (4 H, d, *J*=10.2), 6.7 (4 H, d, *J*=10.2), 2.35 (3 H, s).

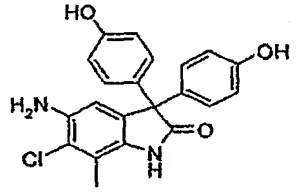
6-Chloro-3,3-bis-(4-hydroxy-phenyl)-7-methyl-5-nitro-1,3-dihydro-indol-2-one (5)



LCMS m/z 411.1 $[(Cl^{35})\ M+H]^+$ @ R_T 1.26 min, 93%

δ_H (400 MHz, DMSO-d6) 7.48 (1 H, s), 6.96 – 6.96 (4 H, m), 6.66 – 6.59 (4 H, m), 2.35 (3 H, s).

5-Amino-6-chloro-3,3-bis-(4-hydroxy-phenyl)-7-methyl-1,3-dihydro-indol-2-one (6)

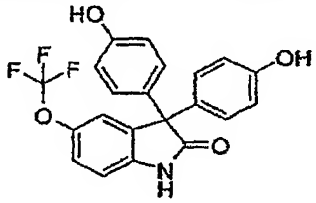


To a solution of 5 (0.1 g, 0.24 mmol) in methanol (2 mL) was added Pd/C (10% w/w, 0.03 g). The black mixture was stirred under hydrogen at room temperature for 16 hours. The catalyst was removed by filtration, and the solvent was removed under reduced pressure to yield 0.084 g (0.22 mmol, 92%) of 5-Amino-6-chloro-3,3-bis-(4-hydroxy-phenyl)-7-methyl-1,3-dihydro-indol-2-one (6).

LCMS m/z 381.16 $[(Cl^{35}) M+H]^+$ @ R_T 0.94 min, 84%. δ_H (400 MHz, DMSO-d6) 11.7 (1 H, s), 8.1 (1 H, s), 2.3 (3 H, s).

3,3-Bis-(4-hydroxy-phenyl)-5-methoxy-1,3-dihydro-indol-2-one (7)

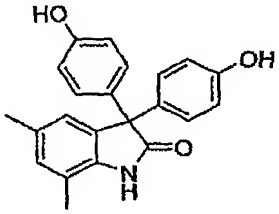
3,3-Bis-(4-hydroxy-phenyl)-5-trifluoromethoxy-1,3-dihydro-indol-2-one (8)



LCMS m/z 402.12 $[M+H]^+$ @ R_T 1.27 min, 96%

δ_H (400 MHz, DMSO-d6) 10.78 (1 H, s), 9.43 (2 H, s), 7.23 (1 H, d, *J*=8.56), 7.17 (1 H, s), 6.99 (1 H, d, *J*=8.56), 6.93 (4 H, d, *J*=8.80), 6.66 (4 H, d, *J*=8.56).

3,3-Bis-(4-hydroxy-phenyl)-5,7-dimethyl-1,3-dihydro-indol-2-one (9)



LCMS m/z 346.19 $[M+H]^+$ @ R_T 1.24 min, 92%

δ_H (400 MHz, DMSO-d6) 10.39 (1 H, s), 9.25 (2 H, s), 6.8 (4 H, d, *J*=8.6), 6.70 (1 H, s), 6.68 (1 H, s), 6.52 (4 H, d, *J*=8.6), 2.09 (6 H, s).

3,3-Bis-(4-hydroxy-phenyl)-2-oxo-2,3-dihydro-1H-indole-7-carboxylic acid (10)

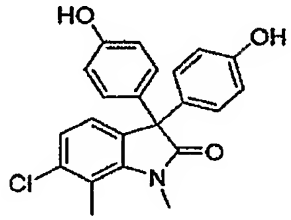
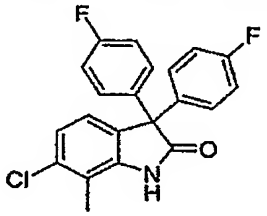
6-Chloro-3,3-bis-(4-hydroxy-phenyl)-1,7-dimethyl-1,3-dihydro-indol-2-one (24)



LCMS m/z 380.11 $[M+H]^+$ @ R_T 1.49 min, 100%

δ_H (400 MHz, Methanol-D4) 7.12 (1 H, d, *J*=7.8 Hz), 6.85 - 7.02 (5 H, m), 6.60 - 6.72 (4 H, m), 3.57 (3 H, s), 2.69 (3 H, s).

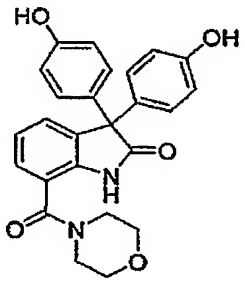
6-Chloro-3,3-bis-(4-fluoro-phenyl)-7-methyl-1,3-dihydro-indol-2-one (25)



LCMS m/z 380.11 $[M+H]^+$ @ R_T 1.79 min, 100%

δ_H (400 MHz, Methanol-D4) 7.15 - 7.30 (4 H, m), 6.97 - 7.13 (6 H, m), 2.34 (3 H, s).

3,3-Bis-(4-hydroxy-phenyl)-7-(morpholine-4-carbonyl)-1,3-dihydro-indol-2-one (26)

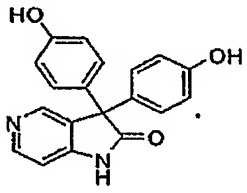


To 10 (1 eq) dissolved in dimethylformamide was added $SOCl_2$ (3 eq) at 0°C. The mixture was stirred for 1 hour and evaporated to remove excess $SOCl_2$. Morfoline (3 eq) was added and the reaction mixture was left for 3 hours at room temperature. The solvent was removed in vacuo and the 26 purified by filtration through a pad of silica using dichloromethane-MeOH as eluent.

LCMS m/z 431.16 $[M+H]^+$

δ_H (400 MHz, Methanol-D4) 7.19 - 7.29 (2 H, m), 7.11 (1 H, m), 6.97 - 7.05 (4 H, m), 6.64 - 6.75 (4 H, m), 3.69 (8 H, brs).

3,3-Bis-(4-hydroxy-phenyl)-1,3-dihydro-pyrrolo[3,2-c]pyridin-2-one (27)



LCMS (BDS-Hypersil C_{18}, 50 mm X 2.1 mm, 5 µ, 2.5 minutes) m/z 319.28 $[MH]^+$ @ retension time 0.76 minute, 100% by UV at 215 nm.

δ_H (400 MHz, CD_3OD) 6.63 (4H, d, *J* 8.6 Hz), 6.93 (4H, d, *J* 8.8 Hz), 6.95 (1H, d, *J* 5.4 Hz), 8.10 (1H, s), 8.24 (1H, d, *J* 5.4Hz).

Example 2: Cell proliferation

Inhibition of the proliferation of human cancer cells is widely used to predict the anti-cancer potential of novel chemicals. Typically, human cancer cell lines derived from tumour material are maintained in monolayer cultures and test chemicals are added for varying durations. Test compounds with anti-cancer potential are expected to reduce proliferation and thereby reduce cell number relative to vehicle treated control cell cultures. Cell number can be monitored by cell counting, determining metabolic rate (e.g. metabolic reduction of tetrazolium salts such as (3-(4,5-dimethylethiazol-2-yl)-2,5-diphenyltetrazolium bromide or alamarBlue), quantifying DNA content (using DNA binding dyes such as BODIPY-FL-14-dUTP) or measuring nucletotide incorporation into DNA (e.g. radiolabelled thymidine or bromo-deoxyuridine incorporation).

One important consideration is whether any inhibitory effects of test compounds are specific to cancer cell proliferation or are due to general inhibition of cell proliferation. This issue can be addressed using paired cell lines; for example, the effects of test compounds on the proliferation of transformed cancer cell lines can be compared with the effects of test compounds on the proliferation of untransformed cells from the same tissue source. Alternatively, phenotypic differences between cancer cell lines can be exploited to evaluate the selectivity of test compounds. For example, the anti-proliferative effects of some compounds are only apparent in certain sub-types of human breast cancer cell lines (e.g. breast cancer cell lines with PTEN gene mutations or gene amplification of the p70S6K protein kinase), but not in breast cancer cell lines that do not exhibit this phenotype (Noh et al (2004) Clinical Cancer Research 10, 1013-1023; Yu et al (2001) Endocrine-Related Cancer 8, 249-258). The selectivity of test compounds in the latter models is associated with the mechanism of compound action and is related to the presence, absence or relative abundance of the protein target of the test compound in the relevant cell lines.

Method

Compound effects were evaluated on the proliferation of MDA-468 and MDA-231 human breast cancer cells. Cells were maintained in growth medium: RPMI 1640 containing 10% foetal bovine serum and 1% pen/strep. Cells were split 1:4 or 1:8 twice a week when 90% confluent. For the cell proliferation assay, cells were plated at 8000 cell/well into 96 well

black Packard Viewplates in growth medium. After 1 day, the growth medium was replaced with growth medium containing test compounds or vehicle, and cells were maintained in culture for a further 2 days. Growth medium was then removed and replaced with 150 µl of alamarBlue in RPMI medium containing 1% pen/strep. Following 120 minutes incubation at 37°C, fluorescent intensity was read using a plate reader.

Results

The results shown in Figure 1 demonstrate the ability of the compounds of the general formula (I) to inhibit the proliferation of MDA468 human breast cancer cells at lower concentrations as those required to inhibit proliferation of MDA231 human breast cancer cells.

Example 3: Protein synthesis studies

The purpose of these studies as to investigate compounds of the general formula (I) have effect on protein synthesis, measured as ^{14}C-Leucine uptake or incorporation into proteins. As described in "Leucine Uptake [14C] Cytostar-T assay, Amersham Biosciences" (CFA773).

MDA-MB-231 and -468 were seeded at 8000 cells/well in CytoStar-T 96-well microplates. And incubated overnight in growth medium. The next day medium was carefully aspirated (8-channel Vacuboy) and 50 µL of fresh pre-warmed medium (10% FCS, 10 mM HEPES pH 7.2 – 7.5) was added. Cells were allowed to equilibrate at 37 °C for 60 min. Test compounds were added in 50 µL medium and 14C-Leucine was added in 100 µL medium (0.5 µCi mL-1 final). Plates were sealed with transparent, adhesive foil. Plates were then incubated in a 37°C for 6h in a humidified incubator. Incorporation of radioactive leucine into proteins (a measure of protein synthesis) was then read by coincidence scintillation (counts per minute (CPM)) using a Wallac Microbeta detector at the indicated time-intervals. A reading a t=0 (5 min after sealing plates) for each well is subtracted as background.

The results are shown in Figure 2 measured after 6 hours.

The results indicate that BIC0043901 (compound (3) above) significantly inhibits ^{14}C-Leucine incorporation in MDA-MB-468 in a concentration dependent manner observed after 240 min compound incubation and up to 22 hours. EC_{50} is estimated to 100 nM (240 min to 22 hours). Interestingly, the effect seems to reach a plateau at the high concentrations corresponding to approx. 1/6 of total incorporated. This indicates that there is some proportion of the protein synthesis that BIC0043901 is not able to affect.

No significant effect of BIC0043901 was observed in MDA-MB-231 up to 430 min. At 22 hours a minor effect is observed at 30 µM. EC_{50} >> 30 µM (22 hours).

The inhibitory effect of BIC0043901 is therefore very specific for MDA-MB-468.

The higher concentrations of the control compounds Anisomycin and Cycloheximide completely inhibit incorporation at all time-points (as opposed to BIC0043901, se above).

Example 4: Western Blot Studies

To investigate the mechanism of action of compounds of general formula (I) Western Blot studies were performed to investigate the activation state of pathways linked to the regulation of protein synthesis (see Figure 3).

Method

MDA-MB-468 cells (also called MDA468) or MDA-MB-231 (also called MDA231) were kept in culture and plated at 400 000 cells/well in 6 well cell culture plate. 16-24 hours after, the growth medium were shifted to growth medium containing compounds.

After 24 or 48 hours incubation with compounds, cells were washed with ice cold PBS buffer and harvested in lysis buffer: Cytobuster reagent (Novagen) containing phosphatase inhibitor cocktail 1 and 2 and protease inhibitor cocktail (Sigma). Samples containing an equal amount of protein were loaded onto 7% Tris Acetate gels, 10% Bis-Tris in MES buffer or 12% Bis-Tris gels using MOPS running buffer (Invitrogen). Following electrophoresis the samples were blotted onto a PVDF membrane (Invitrogen). For membrane blocking and antibody incubations of p70 S6K, Phospho-p70 S6K (Thr389), PathscanI and S6 antibodies (Cell Signalling Technology) a buffer containing 0.2% Tween-20, 5% non-fat dry milk, 5% FBS, in Tris buffered Saline (TBS) were used. For immunoblotting of 4EBP1, Phospho 4EBP1 (Thr37/46), Phospho 4EBP1 (Ser65) (Cell Signalling Technology) and Cyclin D3 (Santa Cruz) a protocol from Cell Signalling Technology were used. Cell Signalling Technology blocking buffer contains 0.1% Tween-20, 5% non fat dry milk in TBS and primary antibody dilution buffer contains 0.1% Tween-20, 5% BSA in TBS. Before adding primary antibody dilution buffer to the membranes, the blots were rinsed briefly in 0.1% Tween-20. All antibody incubations were done overnight at 4°C overnight. After washing the membranes with 0.1% Tween-20 in TBS, the blots were incubated with horseradish peroxidase conjugated anti-Rabbit IgG (1:1000-1:3000; Amersham Biosciences) at room temperature for 1 hour. Peroxidase activity was detected using the ECL detection system (Amersham Biosciences).

Results

Western blot analyses demonstrate that compounds of general formula (I), such as BIC0043901 (Compound (3) above), inhibit the phosphorylation of p70S6K and S6 ribosomal protein in MDA468 cells following 24 hour incubation (Figure 4). Similar effects are observed with the mTOR inhibitor, rapamycin and the PI3 kinase inhibitor LY294002. AKT phosphorylation on Ser473 is not inhibited by BIC0043901 or rapamycin, whereas LY294002 inhibits the phosphorylation of AKT on Ser473. Furthermore, BIC0043901 induces a gel mobility shift in 4E-BP1 as shown using both total and thr37/46 phospho-specific anti-4E-BP1 antibodies, indicative of an alteration in the phosphorylation status of 4E-BP1. This is confirmed by the inhibitory effect of BIC0043901 on the phosphorylation of ser65 of 4E-BP1. Similar effects are observed with the mTOR inhibitor, rapamycin and the PI3 kinase inhibitor LY294002. In addition, expression of the cell cycle regulatory protein cyclin D3 is reduced by BIC0043901, rapamycin and LY294002. These data suggest that mammalian homologue of TOR (mTOR) kinase is active in MDA468 cells under growth conditions, leading to phosphorylation of mTOR target proteins such as p70S6 kinase (p70S6K) and 4EBP1, and downstream regulation of protein synthesis and cell proliferation via S6 ribosomal protein, eukaryotic translation initiation factor, eIF4, and cyclin D3. Compounds of general formula (I), such as BIC0043901, as well as rapamycin and LY294002, inhibit this pathway in MDA468 cells and might be expected to reduce protein synthesis and cell proliferation.

Compounds of general formula (I) such as BIC0043901 did not inhibit the phosphorylation of p70S6K, or induce a gel mobility shift in total p70S6K, in MDA231 cells following 48 hour incubation (Figure 5). In contrast, rapamycin and LY294002 inhibit the phosphorylation of p70S6K, and induce a gel mobility shift in total p70S6K, following 48 hour incubation in MDA231 cells. BIC0043901, rapamycin and LY294002 all inhibit the phosphorylation of p70S6K and induce a gel mobility shift in total p70S6K in MDA468 cells following 48 hour incubation, demonstrating a cell selective effect of compounds of general formula (I), such as BIC0043901.

Example 5: Xenograft studies

The purpose of this study was to evaluate whether compounds of general formula (I), such as BIC0043901 (compound (3) above), inhibit the growth of cancer cells in a xenograft animal model.

Method

Male nude NMRU nu/nu mice weighing 25-45 grams are implanted with PRXF PC3M tumours by subcutaneous implantation in both flanks. BIC0043901 (50 & 100mg) is administered

daily by the per-oral (PO) route in an appropriate vehicle (2% DMSO:5% Tween 80: 93% saline) either alone or in combination with a sub-optimal dose of paclitaxol (10mg/kg ; intravenous; given once/week). Tumor diameter is determined twice/week for a period of 14 days.

Results

BIC0043901 reduces the rate of tumour cell growth when given as a monotherapy (see Figure 6). Furthermore, additive anti-growth effects are noted in combination with paclitaxol.

Example 5: Effect BIC0043901 on Cell Proliferation of Breast and Prostate Cancer Cell Lines

Materials:

All cell lines were obtained from ATCC. Breast cancer lines: MDA-MB-231, MDA-MB-435S, MDA-MB-453, MDA-MB-468, SKBr-3, BT-474, BT-549, MCF-7, MCF-10A, T-47D, and ZR75-1. Prostate cancer lines: PC-3, LnCaP, DU-145. Terfenadine is obtained from Sigma-Aldrich. Penicillin-Streptomycin and gentamicin is purchased from Invitrogen. Alamar Blue reagent is from BioSource.

Methods:

Cell culture:

All cell lines except MCF-10A are maintained in RPMI medium containing 10% foetal Bovine Serum (FBS) 100 U/ml penicillin, and 100 µg/ml streptomycin. MCF-10A is maintained in mammary epithelial growth medium (MEGM) with singlequot addition (BPE, hydrocortisone, hEGF, insulin, gentamicin/amphotecirin-B) (Clonetics/Cambrex Bio Science). All cell lines are incubated at 37°C, 5% CO_2, and 95% humidity.

Alamar Blue cell proliferation assay:

Cells are plated in black cell culture treated Packard/Perkin Elmer 96-viewplates in 100 µl/well RPMI medium containing 10% FBS, 100 U/ml penicillin, and 100 µg/ml streptomycin. Each cell line is tested in triplicate in 1% FBS or in 10% FBS. Cell densities are estimated based on growth during the assay to 80-90% confluency, cell densities are shown in table 1. The day after plating, the growth medium is changed to either 100 µl/well RPMI containing 1% FBS, 100 U/ml penicillin, 100 µg/ml streptomycin and 25 µg/ml gentamicin or100 µl/well RPMI containing 10% FBS, 100 U/ml penicillin, 100 µg/ml streptomycin and 25 µg/ml

gentamicin. Compounds are added according to the plate map shown in Figure 7. Briefly, compounds are diluted in compound plates in growth medium containing either 1% FBS or 10% FBS corresponding to the medium in the plates. Compounds are transferred to the cell plates by transfer of 100 µl/well resulting in a total volume of 200 µl/well containing compound concentrations as indicated in the plate map and 0.25% DMSO. Terfenedine is used as a control for maximal cell kill in wells containing 50 µM terfenedine and 0.5% DMSO (Smax). Negative control wells (So) contain medium with 0.25% DMSO.

After compound addition cell plates are incubated undisturbed for 72 hours at 37°C, 5% CO_2, and 95% humidity.

The number of viable cells are estimated using an Alamar Blue assay that measures mitochondrial activity. The medium is decanted and replaced with 150 µl/well RPMI medium without phenol-red containing 100 U/ml penicillin, and 100 µg/ml streptomycin and 10% Alamar Blue. The plates are placed in the incubator at 37°C, 5% CO_2, and 95% humidity for 2 hours. Then, plates are moved to a table at room temperature and allowed to cool for 1 hour without stacking the plates. Alamar blue signal is read in a fluorescence plate reader using a 590 nm emission filter and a 530 nm exitation filter.

Data are normalised to values from 0% activity (S_0) to 100% activity (S_{max}). Average values for S_0 and S_{max} are calculated and used to calculate percent activity (PCTACT) in the assays by the formula: $PCTACT=(X_{raw}-S_{max})/(S_0-S_{max})*100$.

Z'-values for assay plates are calculated by:

$Z'=1-3*(STDEV(S_0)+STDEV(S_{max}))/(S_0-S_{max})$. In aveage Z'~0.8 and always above 0.6.

Sigmoidal curve fitting is done using Prism; Equation: Y=Bottom + (Top-Bottom)/(1+10^((LogEC$_{50}$-X)*HillSlope)).

Table 1. Cell densities at plating in 96-well plates

Cell line	Cells/well in 1% FBS	Cells/well in 10% FBS
MDA-MB-231	6000	4000
MDA-MB-435S	10000	5000
MDA-MB-453	3000	2000
MDA-MB-468	6000	4000
SKBr-3	7000	6000
BT-474	10000	10000
BT-549	6000	5000
MCF-7	5000	5000
T-47D	5000	5000
ZR75-1	7000	7000
PC-3	4000	3000
LnCaP	8000	8000
DU-145	2000	1250

Results:

All cell lines are run in cell proliferation in medium containing either 1% serum or 10% serum, both estimations in triplicate. Percent activity (PCTACT) in the assays, equal to percent inhibition of growth, is calculated as described in Methods.

Table 2 summarizes the EC_{50} values and maximal activities for cell proliferation inhibition of the cell lines. Cell proliferation curve fits are shown in Figures 8 to 11.

The tested breast cancer cell lines fall into two very clear categories. 1) Cell lines that are sensitive to BIC0043901 with cell proliferation EC_{50} values ranging from 0.6 nM to 80 nM. These include T47-D, MCF-7, MDA-MB-453, MDA-MB-468, BT-474, SKBr-3 and BT-549 grown under both high (10% FBS) and low (1% FBS) serum conditions. 2) Cell lines that are insensitive to BIC0043901 with EC_{50} values above 5 µM. These include MDA-MB-231, MDA-MB-435S, and ZR75-1 grown under both high (10% FBS) and low (1% FBS) serum conditions. Percent activity as related to growth inhibition with 50 µM terfenedine ranged from 60% to 90% growth inhibition. In general, the cell lines are slightly more sensitive to the compound under low (1% FBS) serum conditions than under high (10% FBS) serum conditions. The most sensitive line is MDA-MB-453.

PC-3 prostate cancer cells are clearly sensitive to BIC0043901, while DU-145 is not. LnCaP cells are sensitive to BIC0043901, but only when assayed in 1% FBS and not in 10% FBS, suggesting that serum stimulates signalling pathways in LnCaP cells that render them insensitive to BIC0043901 treatment.

Table 2. Summary table of EC_{50} values (nM) and max activities for cell proliferation inhibition.

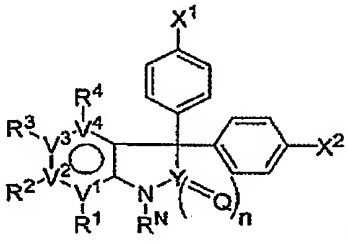
Cell line	EC50	Max Act	EC50	Max Act
T47-D	12.0	83	37.4	78
MCF-7	24.3	75	76.2	59
MDA-MB-435S	9490	108	>2000	>60
MDA-MB-453	0.6	92	18.5	89
MDA-MB-468	15.5	83	50.5	83
MDA-MB-231	9080	103	>2000	>45
BT-474	12.6	74	37.4	72
SKBr-3	12.4	79	42.8	85
BT-549	18.1	64	68.1	57
ZR75-1	>3000	100	>1000	100
DU-145	4680	109	>3000	100
LnCaP	22.9	72	5840	86.62
PC-3	19.9	68	89.4	77.33

Notes:

EC_{50} values are shown in nano-molar concentration. Max Act is maximal inhibition of cell growth as compared to maximal cell kill estimated by terfenedine addition (see Methods).

CLAIMS

1. Use of a compound of the general formula (I)



(I)

wherein

V^1, V^2, V^3, and V^4 independently are selected from a carbon atom, a non-quaternary nitrogen atom, an oxygen atom, and a sulfur atom, and where V^4 further may be selected from a bond, so that $-V^1-V^2-V^3-V^4-$ together with the atoms to which V^1 and V^4 are attached form an aromatic or heteroaromatic ring;

R^1, R^2, R^3, and R^4, when attached to a carbon atom, independently are selected from hydrogen, optionally substituted C_{1-6}-alkyl, optionally substituted C_{2-6}-alkenyl, hydroxy, optionally substituted C_{1-6}-alkoxy, optionally substituted C_{2-6}-alkenyloxy, carboxy, optionally substituted C_{1-6}-alkoxycarbonyl, optionally substituted C_{1-6}-alkylcarbonyl, optionally substituted C_{1-6}-alkylcarbonyloxy, formyl, amino, mono- and di(C_{1-6}-alkyl)amino, carbamoyl, mono- and di(C_{1-6}-alkyl)aminocarbonyl, C_{1-6}-alkylcarbonylamino, C_{1-6}-alkylsulphonylamino, cyano, carbamido, mono- and di(C_{1-6}-alkyl)aminocarbonylamino, C_{1-6}-alkanoyloxy, C_{1-6}-alkylsulphonyl, C_{1-6}-alkylsulphinyl, aminosulfonyl, mono- and di(C_{1-6}-alkyl)aminosulfonyl, nitro, optionally substituted C_{1-6}-alkylthio, aryl, aryloxy, arylcarbonyl, arylamino, heterocyclyl, heterocyclyloxy, heterocyclylamino, heterocyclylcarbonyl, heteroaryl, heteroaryloxy, heteroarylamino, heteroarylcarbonyl, and halogen, where any C_{1-6}-alkyl as an amino substituent is optionally substituted with hydroxy, C_{1-6}-alkoxy, amino, mono- and di(C_{1-6}-alkyl)amino, carboxy, C_{1-6}-alkylcarbonylamino, C_{1-6}-alkylaminocarbonyl, or halogen(s), and wherein any aryl, heterocyclyl and heteroaryl may be optionally substituted;

R^1, R^2, R^3, and R^4, when attached to a nitrogen atom, independently are selected from hydrogen, optionally substituted C_{1-6}-alkyl, hydroxy, optionally substituted C_{1-6}-alkoxy, optionally substituted C_{1-6}-alkoxycarbonyl, optionally substituted C_{1-6}-alkylcarbonyl, formyl, mono- and di(C_{1-6}-alkyl)aminocarbonyl, amino, C_{1-6}-alkylcarbonylamino, mono- and di(C_{1-6}-alkyl)amino, C_{1-6}-alkylsulphonyl, C_{1-6}-alkylsulphinyl, aryl, aryloxy, arylcarbonyl, arylamino, heterocyclyl, heterocyclyloxy, heterocyclylcarbonyl, heterocyclylamino, heteroaryl,

heteroaryloxy, heteroarylcarbonyl, and heteroarylamino; where any C_{1-6}-alkyl as an amino substituent is optionally substituted with hydroxy, C_{1-6}-alkoxy, amino, mono- and di(C_{1-6}-alkyl)amino, carboxy, C_{1-6}-alkylcarbonylamino, C_{1-6}-alkylaminocarbonyl, or halogen(s), and wherein any aryl, heterocyclyl and heteroaryl may be optionally substituted;

or R^1 and R^2 together with the carbon atoms to which they are attached form a ring, e.g. an aromatic ring, a carbocyclic ring, a heterocyclic ring or a heteroaromatic ring, in particular an aromatic ring, a heterocyclic ring or a heteroaromatic ring;

X^1 and X^2 are independently selected from halogen, hydroxy, optionally substituted C_{1-6}-alkoxy, optionally substituted C_{1-6}-alkylcarbonyloxy, amino, mono- and di(C_{1-6}-alkyl)amino, C_{1-6}-alkylcarbonylamino, C_{1-6}-alkylsulphonylamino, mono- and di(C_{1-6}-alkyl)amino-carbonylamino, C_{1-6}-alkanoyloxy, mercapto, optionally substituted C_{1-6}-alkylthio, C_{1-6}-alkylsulfonyl, mono- and di(C_{1-6}-alkyl)aminosulfonyl, aryloxy, arylamino, heterocyclyloxy, heterocyclylamino, heteroaryloxy and heteroarylamino, where any C_{1-6}-alkyl as an amino or sulphur substituent is optionally substituted with hydroxy, C_{1-6}-alkoxy, amino, mono- and di(C_{1-6}-alkyl)amino, carboxy, C_{1-6}-alkylcarbonylamino, C_{1-6}-alkylaminocarbonyl, or halogen(s), and wherein any aryl, heterocyclyl and heteroaryl may be optionally substituted;

$>Y(=Q)_n$ is selected from >C=O, >C=S, >S=O and $>S(=O)_2$; and

R^N is selected from the group consisting of hydrogen, optionally substituted C_{1-6}-alkyl, hydroxy, optionally substituted C_{1-6}-alkoxy, optionally substituted C_{1-6}-alkoxycarbonyl, optionally substituted C_{1-6}-alkylcarbonyl, formyl, mono- and di(C_{1-6}-alkyl)aminocarbonyl, amino, C_{1-6}-alkylcarbonylamino, mono- and di(C_{1-6}-alkyl)amino, C_{1-6}-alkylsulphonyl, and C_{1-6}-alkylsulphinyl; where any C_{1-6}-alkyl as an amino substituent is optionally substituted with hydroxy, C_{1-6}-alkoxy, amino, mono- and di(C_{1-6}-alkyl)amino, carboxy, C_{1-6}-alkylcarbonylamino, C_{1-6}-alkylaminocarbonyl, or halogen(s); and

pharmaceutically acceptable salts and prodrugs thereof;

for the preparation of a medicament for the treatment of cancer in a mammal.

2. The use according to claim 1, wherein each of the benzene rings to which X^1 and X^2 are attached further may be substituted with one, two, three or four fluoro atoms, in particular each benzene ring to which X^1 and X^2 are attached are substituted with two fluoro atoms in the ortho positions relative to the substituents X^1 and X^2, respectively.

3. The use according to any one of the preceding claims, wherein R^1, R^2, R^3 and R^4 are not all hydrogen.

4. The use according to any one of the preceding claims, wherein $-V^1-V^2-V^3-V^4-$ together with the atoms to which V^1 and V^4 are attached form a ring selected from a benzene ring, a thiophene ring (V^1=S, V^2=V^3=C(-) and V^4=bond; V^2=S, V^1=V^3=C(-) and V^4=bond; or V^3=S, V^1=V^2=C(-) and V^4=bond), a furan ring (V^1=O, V^2=V^3=C(-) and V^4=bond; V^2=O, V^1=V^3=C(-) and V^4=bond; or V^3=O, V^1=V^2=C(-) and V^4=bond), a pyrazole ring (V^1=N(-), V^2=N, V^3=C(-) and V^4=bond; V^1=N, V^2=N(-), V^3=C(-) and V^4=bond), an imidazole ring (V^1=N(-), V^2=C(-), V^3=N and V^4=bond; V^1=N, V^2=C(-), V^3=N(-) and V^4=bond), a pyridine ring (V^1=N, V^2=V^3=V^4=C(-); V^2=N, V^1=V^3=V^4=C(-); V^3=N, V^1=V^2=V^4=C(-) and V^4=N, V^1=V^2=V^3=C(-)), a pyrimidine ring (V^1=V^3=N, V^2=V^4=C(-); V^2=V^4=N, V^1=V^3=C(-)), pyrazines (V^1=V^4=N, V^2=V^3=C(-)), a pyridazine ring (V^1=V^2=N, V^3=V^4=C(-); V^2=V^3=N, V^1=V^4=C(-); V^3=V^4=N, V^1=V^2=C(-)), a thiazole ring (V^1=N, V^2=C(-), V^3=S, V^4=bond; V^1=S, V^2=C(-), V^3=N, V^4=bond), and an isothiazole ring (V^1=N, V^2=S, V^3=C(-), V^4=bond; V^1=S, V^2=N, V^3=C(-), V^4=bond; V^1=C(-), V^2=S, V^3=N, V^4=bond; V^1=C(-), V^2=N, V^3=S, V^4=bond).

5. The use according to claim 4, wherein $-V^1-V^2-V^3-V^4-$ together with the atoms to which V^1 and V^4 are attached form a ring selected from a benzene ring, a thiophene ring, a furan ring, a pyrazole ring, an imidazole ring, a pyridine ring, a pyrimidine ring, pyrazines, and a pyridazine ring.

6. The use according to claim 5, wherein the ring is selected from a benzene ring and a pyridine ring where the nitrogen atom represents V^3.

7. The use according to any one of the preceding claims, wherein R^1, R^2, R^3, and R^4, when attached to a carbon atom, independently are selected from hydrogen, optionally substituted C_{1-6}-alkyl, optionally substituted C_{2-6}-alkenyl, hydroxy, optionally substituted C_{1-6}-alkoxy, optionally substituted C_{2-6}-alkenyloxy, carboxy, optionally substituted C_{1-6}-alkoxycarbonyl, optionally substituted C_{1-6}-alkylcarbonyl, optionally substituted C_{1-6}-alkylcarbonyloxy, formyl, amino, mono- and di(C_{1-6}-alkyl)amino, carbamoyl, mono- and di(C_{1-6}-alkyl)aminocarbonyl, C_{1-6}-alkylcarbonylamino, C_{1-6}-alkylsulphonylamino, cyano, carbamido, mono- and di(C_{1-6}-alkyl)aminocarbonylamino, C_{1-6}-alkanoyloxy, C_{1-6}-alkylsulphonyl, C_{1-6}-alkylsulphinyl, aminosulfonyl, mono- and di(C_{1-6}-alkyl)aminosulfonyl, nitro, optionally substituted C_{1-6}-alkylthio, and halogen, where any C_{1-6}-alkyl as an amino substituent is optionally substituted with hydroxy, C_{1-6}-alkoxy, amino, mono- and di(C_{1-6}-alkyl)amino, carboxy, C_{1-6}-alkylcarbonylamino, C_{1-6}-alkylaminocarbonyl, or halogen(s); and

R^1, R^2, R^3, and R^4, when attached to a nitrogen atom, independently are selected from hydrogen, optionally substituted C_{1-6}-alkyl, hydroxy, optionally substituted C_{1-6}-alkoxy,

optionally substituted C_{1-6}-alkoxycarbonyl, optionally substituted C_{1-6}-alkylcarbonyl, formyl, mono- and di(C_{1-6}-alkyl)aminocarbonyl, amino, C_{1-6}-alkylcarbonylamino, mono- and di(C_{1-6}-alkyl)amino, C_{1-6}-alkylsulphonyl, and C_{1-6}-alkylsulphinyl; where any C_{1-6}-alkyl as an amino substituent is optionally substituted with hydroxy, C_{1-6}-alkoxy, amino, mono- and di(C_{1-6}-alkyl)amino, carboxy, C_{1-6}-alkylcarbonylamino, C_{1-6}-alkylaminocarbonyl, or halogen(s), and wherein any aryl, heterocyclyl and heteroaryl may be optionally substituted.

8. The use according to any one of the preceding claims, wherein R^1, R^2, R^3, and R^4 independently are selected from hydrogen, halogen, optionally substituted C_{1-6}-alkyl, hydroxy, optionally substituted C_{1-6}-alkoxy, optionally substituted C_{1-6}-alkoxycarbonyl, optionally substituted C_{1-6}-alkylcarbonyl, amino, C_{1-6}-alkylcarbonylamino, C_{1-6}-alkylcarbonylamino, C_{1-6}-alkylsulphonylamino, mono- and di(C_{1-6}-alkyl)aminosulfonyl, and mono- and di(C_{1-6}-alkyl)amino, where any C_{1-6}-alkyl as an amino substituent is optionally substituted with hydroxy, C_{1-6}-alkoxy, amino, mono- and di(C_{1-6}-alkyl)amino, carboxy, C_{1-6}-alkylcarbonylamino, C_{1-6}-alkylaminocarbonyl, or halogen(s).

9. The use according to claim 8, wherein R^1, R^2, R^3, and R^4 independently are selected from hydrogen, optionally substituted C_{1-6}-alkyl, hydroxy, optionally substituted C_{1-6}-alkoxy, optionally substituted C_{1-6}-alkoxycarbonyl, optionally substituted C_{1-6}-alkylcarbonyl, amino, C_{1-6}-alkylcarbonylamino, C_{1-6}-alkylcarbonylamino, C_{1-6}-alkylsulphonylamino, mono- and di(C_{1-6}-alkyl)aminosulfonyl, and mono- and di(C_{1-6}-alkyl)amino, where any C_{1-6}-alkyl as an amino substituent is optionally substituted with hydroxy, C_{1-6}-alkoxy, amino, mono- and di(C_{1-6}-alkyl)amino, carboxy, C_{1-6}-alkylcarbonylamino, C_{1-6}-alkylaminocarbonyl, or halogen(s).

10. The use according to any one of the preceding claims, wherein R^1 and R^2 together with the carbon atoms to which they are attached form a heterocyclic ring or a heteroaromatic ring.

11. The use according to any one of the claims 1-9, wherein R^1 and R^2 together with the carbon atoms to which they are attached form an aromatic ring or a carbocyclic ring.

12. The use according to any one of the preceding claims, wherein R^1 is selected from hydrogen, halogen, C_{1-6}-alkyl, trifluoromethyl and C_{1-6}-alkoxy, when V^1 is a carbon atom.

13. The use according to any one of the preceding claims, wherein R^2 is selected from hydrogen, halogen, optionally substituted aryl, optionally substituted aryloxy, and optionally substituted heteroaryl, when V^2 is a carbon atom.

14. The use according to any one of the preceding claims, wherein R^3 is selected from hydrogen, optionally substituted C_{1-6}-alkoxy, halogen, cyano, optionally substituted aryl, optionally substituted aryloxy, optionally substituted heteroaryl, amino, C_{1-6}-alkylcarbonylamino, C_{1-6}-alkylsulphonylamino, and mono- and di(C_{1-6}-alkyl)aminosulfonyl, when V^3 is a carbon atom.

15. The use according to any one of the preceding claims, wherein R^4 is hydrogen, when V^4 is a carbon atom.

16. The use according to any one of the preceding claims, wherein X^1 and X^2 are independently selected from hydroxy, optionally substituted C_{1-6}-alkoxy, optionally substituted C_{1-6}-alkylcarbonyloxy, amino, mono- and di(C_{1-6}-alkyl)amino, C_{1-6}-alkylcarbonylamino, C_{1-6}-alkylsulphonylamino, mono- and di(C_{1-6}-alkyl)aminocarbonylamino, C_{1-6}-alkanoyloxy, and mono- and di(C_{1-6}-alkyl)aminosulfonyl, where any C_{1-6}-alkyl as an amino substituent is optionally substituted with hydroxy, C_{1-6}-alkoxy, amino, mono- and di(C_{1-6}-alkyl)amino, carboxy, C_{1-6}-alkylcarbonylamino, C_{1-6}-alkylaminocarbonyl, or halogen(s).

17. The use according to any one of the preceding claims, wherein X^1 and X^2 independently are selected from halogen, OR^6, $OCOR^5$, $N(R^6)_2$, $NHCOR^5$, $NHSO_2R^5$, and $NHCON(R^6)_2$, wherein R^5 is selected from C_{1-6}-alkyl, optionally substituted aryl and optionally substituted heteroaryl, and each R^6 independently is selected from hydrogen, C_{1-6}-alkyl, optionally substituted aryl and optionally substituted heteroaryl.

18. The use according to claim 17, wherein X^1 and X^2 independently are selected from OR^6, $OCOR^5$, $N(R^6)_2$, $NHCOR^5$, $NHSO_2R^5$, and $NHCON(R^6)_2$, wherein R^5 is selected from C_{1-6}-alkyl, optionally substituted aryl and optionally substituted heteroaryl, and each R^6 independently is selected from hydrogen, C_{1-6}-alkyl, optionally substituted aryl and optionally substituted heteroaryl.

19. The use according to any one of the preceding claims, wherein X^1 and X^2 independently are selected from halogen, hydroxy, OAc, NH_2, NMe_2, NHAc, $NHSO_2Me$ and $NHCONMe_2$.

20. The use according to claim 19, wherein X^1 and X^2 independently are selected from hydroxy, OAc, NH_2, NMe_2, NHAc, $NHSO_2Me$ and $NHCONMe_2$.

21. The use according to any one of the preceding claims, wherein X^1 and X^2 are the same.

22. The use according to any one of the preceding claims, wherein Y is a carbon atom and Q is an oxygen atom, i.e. $>Y(=Q)_n$ is >C=O.

23. The use according to any one of the claims 1-21, wherein Y is a sulfur atom, n is 2, and each Q is an oxygen atom, i.e. $>Y(=Q)_n$ is $>S(=O)_2$.

24. The use according to any one of the preceding claims, wherein R^N is selected from hydrogen, C_{1-6}-alkyl, amino, and C_{1-6}-alkylcarbonylamino, in particular R^N is hydrogen.

25. The use according to any one of the preceding claims, wherein V^1, V^2, V^3, V^4 all are a carbon atom, $>Y(=Q)_n$ is $>C=O$, and R^N is hydrogen.

26. The use according to claim 25, wherein R^4 is hydrogen.

27. The use according to claim 26, wherein R^3 and R^4 both are hydrogen.

28. The use according to any one of the claims 25-27, wherein R^1 is C_{1-4}-alkyl and R^2 is halogen, e.g. R^1 is methyl and R^2 is chloro.

29. The use according to any one of the claims 25-27, wherein R^1 and R^2 together with the carbon atoms to which they are attached form a ring, e.g. an aromatic ring, a carbocyclic ring, a heterocyclic ring or a heteroaromatic ring, in particular an aromatic ring or a carbocyclic ring.

30. The use according to any one of the claims 25-29, wherein each of X^1 and X^2 independently are selected from halogen, hydroxy, C_{1-4}-alkoxy, amino, and dimethylamino.

31. The use according to claim 26, wherein R^1, R^2 and R^4 all are hydrogen.

32. The use according to any one of the claims 25 and 31, wherein R^3 is selected from hydrogen, halogen, nitro, C_{1-4}-alkyl, C_{1-4}-alkoxy, trifluoromethoxy, amino, carboxy, and dimethylaminocarbonyl, in particular hydrogen, halogen, nitro, methyl, methoxy, and amino.

33. The use according to any one of the claims 31-32, wherein each of X^1 and X^2 independently are selected from halogen, hydroxy, C_{1-4}-alkoxy, amino, and dimethylamino.

34. The use according to claim 26, wherein R^2, R^3 and R^4 all are hydrogen.

35. The use according to any one of the claims 25 and 34, wherein R^1 is selected from fluoro, chloro, bromo, C_{1-4}-alkyl, trifluoromethyl, C_{1-4}-alkoxy, and dimethylaminocarbonyl.

36. The use according to any one of the claims 34-35, wherein each of X^1 and X^2 independently are selected from halogen, hydroxy, C_{1-4}-alkoxy, amino, and dimethylamino.

37. The use according to any one of the claims 25 and 26, wherein R^1 is selected from halogen, C_{1-4}-alkyl, trifluoromethyl, C_{1-4}-alkoxy, and dimethylaminocarbonyl, R^2 is selected from hydrogen and halogen, and R^3 is selected from hydrogen, halogen, C_{1-4}-alkyl, and amino; where R^2 and R^3 are not both hydrogen.

38. The use according to claim 37, wherein each of X^1 and X^2 independently are selected from halogen, hydroxy, C_{1-4}-alkoxy, amino, and dimethylamino.

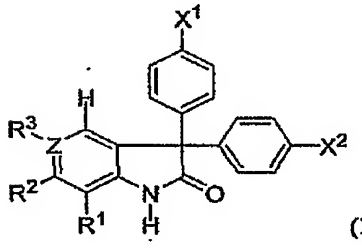
39. The use according to any one of the claims 1-24, wherein at least one of V^1, V^2, V^3, and V^4 is selected from a non-quaternary nitrogen atom, an oxygen atom, and a sulfur atom, and where V^4 further may be selected from a bond, so that $-V^1-V^2-V^3-V^4-$ together with the atoms to which V^1 and V^4 are attached form a heteroaromatic ring.

40. The use according to claim 39, wherein the heteroaromatic ring is selected from a pyridine ring and a pyrazole ring.

41. The use according to any one of the claims 39-40, wherein $>Y(=Q)_n$ is $>C=O$ and R^N is hydrogen.

42. The use according to any one of the claims 25-41, wherein X^1 and X^2 are the same.

43. Use of a 3,3-diphenyl-1,3-dihydro-indol-2-one type compound of the formula (II)



(II)

wherein

R^1 is selected from hydrogen, halogen, C_{1-6}-alkyl, trifluoromethyl and C_{1-6}-alkoxy;

R^2 is selected from hydrogen, halogen, optionally substituted aryl, optionally substituted aryloxy, and optionally substituted heteroaryl;

R^3 is selected from hydrogen, optionally substituted C_{1-6}-alkoxy, halogen, cyano, and optionally substituted aryl, optionally substituted aryloxy, optionally substituted heteroaryl, amino, C_{1-6}-alkylcarbonylamino, C_{1-6}-alkylsulphonylamino, and mono- and di(C_{1-6}-alkyl)aminosulfonyl;

Z is CH or N; and

X^1 and X^2 are independently selected from halogen, OR^6, $OCOR^5$, $N(R^6)_2$, $NHCOR^5$, $NHSO_2R^5$, and $NHCON(R^6)_2$, wherein R^5 is selected from C_{1-6}-alkyl, optionally substituted aryl and optionally substituted heteroaryl, and each R^6 independently is selected from hydrogen, C_{1-6}-alkyl, optionally substituted aryl and optionally substituted heteroaryl; and

pharmaceutically acceptable salts and prodrugs thereof;

for the preparation of a medicament for the treatment of cancer in a mammal.

44. The use according to claim 43, wherein each of the benzene rings to which X^1 and X^2 are attached further may be substituted with one, two, three or four fluoro atoms, in particular each benzene ring to which X^1 and X^2 are attached are substituted with two fluoro atoms in the ortho positions relative to the substituents X^1 and X^2, respectively.

45. The use according to any one of the claims 43 and 44, wherein X^1 and X^2 are independently selected from OR^6, $OCOR^5$, $N(R^6)_2$, $NHCOR^5$, $NHSO_2R^5$, and $NHCON(R^6)_2$, wherein R^5 is selected from C_{1-6}-alkyl, optionally substituted aryl and optionally substituted heteroaryl, and each R^6 independently is selected from hydrogen, C_{1-6}-alkyl, optionally substituted aryl and optionally substituted heteroaryl.

46. The use according to any one of the claims 43-45, wherein R^1 is selected from C_{1-6}-alkyl and C_{1-6}-alkoxy, such as from methyl, ethyl, isopropyl, methoxy, ethoxy and isopropoxy, in particular from methoxy, ethoxy and isopropoxy, or from methyl, ethyl, and isopropyl.

47. The use according to any one of the claims 43-46, wherein R^2 is selected from hydrogen, chloro, methoxy, dimethylamino, phenyl, phenoxy, optionally substituted thiophen-2-yl, and optionally substituted thiophen-3-yl.

48. The use according to any one of the claims 43-47, wherein R^3 is selected from hydrogen, methoxy, fluoro, chloro, cyano, phenyl, phenoxy, optionally substituted thiophen-2-yl, and optionally substituted thiophen-3-yl, amino, acetylamino, methylsulfonylamino, and dimethylaminosulfonyl.

49. The use according to any one of the claims 43-48, wherein X^1 and X^2 independently are selected from halogen, hydroxy, OAc, NH_2, NMe_2, NHAc, $NHSO_2Me$ and $NHCONMe_2$.

50. The use according to claim 49, wherein X^1 and X^2 independently are selected from hydroxy, OAc, NH_2, NMe_2, NHAc, $NHSO_2Me$ and $NHCONMe_2$.

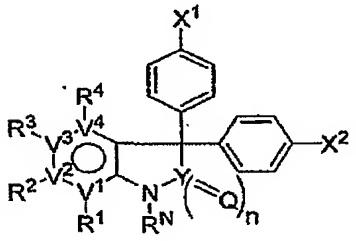
51. The use according to any one of the claims 43-50, wherein X^1 and X^2 are the same.

52. The use according to any one of preceding claims, wherein the compound is selected from Compounds 1 to 200 listed herein.

53. The use according to any one of preceding claims, wherein the medicament further comprises one or more other chemotherapeutic agents.

54. A compound as defined in any one of the claims 1-52 for use as a medicament, with the proviso that the compound is not one selected from 3,3-bis-(4-hydroxy-phenyl)-1,3-dihydro-indol-2-one and acetic acid 4-[3-(4-acetoxy-phenyl)-2-oxo-2,3-dihydro-1H-indol-3-yl]-phenyl ester.

55. A compound of the general formula (I)



(I)

as defined in any one of the claims 1-42, with the proviso that the compound is not one selected from

3,3-bis-(4-hydroxy-phenyl)-1,3-dihydro-indol-2-one,

3,3-bis-(4-hydroxy-phenyl)-7-methyl-1,3-dihydro-indol-2-one;

3,3-bis-(4-hydroxy-phenyl)-4,5-dimethyl-1,3-dihydro-indol-2-one ;

3,3-bis-(4-hydroxy-phenyl)-5,7-dimethyl-1,3-dihydro-indol-2-one;

5-bromo-3,3-bis-(4-hydroxy-phenyl)-1,3-dihydro-indol-2-one;

5-chloro-3,3-bis-(4-hydroxy-phenyl)-1,3-dihydro-indol-2-one;

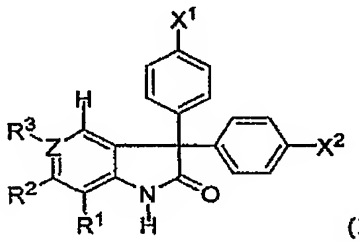
3,3-bis-(4-hydroxy-phenyl)-5-methoxy-1,3-dihydro-indol-2-one;

3,3-bis-(4-hydroxy-phenyl)-5-methyl-1,3-dihydro-indol-2-one;

6-chloro-3,3-bis-(4-hydroxy-phenyl)-7-methyl-1,3-dihydro-indol-2-one;

acetic acid 4-[3-(4-acetoxy-phenyl)-2-oxo-2,3-dihydro-1H-indol-3-yl]-phenyl ester; and
acetic acid 4-[3-(4-acetoxy-phenyl)-5-methyl-2-oxo-2,3-dihydro-1H-indol-3-yl]-phenyl ester.

56. A 3,3-Diphenyl-1,3-dihydro-indol-2-one type compound of the formula (II)



(II)

as defined in any one of the claims 43-52, with the proviso that the compound is not one selected from:

3,3-bis-(4-hydroxy-phenyl)-1,3-dihydro-indol-2-one,
3,3-bis-(4-hydroxy-phenyl)-7-methyl-1,3-dihydro-indol-2-one;
3,3-bis-(4-hydroxy-phenyl)-4,5-dimethyl-1,3-dihydro-indol-2-one ;
3,3-bis-(4-hydroxy-phenyl)-5,7-dimethyl-1,3-dihydro-indol-2-one;
5-bromo-3,3-bis-(4-hydroxy-phenyl)-1,3-dihydro-indol-2-one;
5-chloro-3,3-bis-(4-hydroxy-phenyl)-1,3-dihydro-indol-2-one;
3,3-bis-(4-hydroxy-phenyl)-5-methoxy-1,3-dihydro-indol-2-one;
3,3-bis-(4-hydroxy-phenyl)-5-methyl-1,3-dihydro-indol-2-one;
6-chloro-3,3-bis-(4-hydroxy-phenyl)-7-methyl-1,3-dihydro-indol-2-one;
acetic acid 4-[3-(4-acetoxy-phenyl)-2-oxo-2,3-dihydro-1H-indol-3-yl]-phenyl ester; and
acetic acid 4-[3-(4-acetoxy-phenyl)-5-methyl-2-oxo-2,3-dihydro-1H-indol-3-yl]-phenyl ester.

57. A pharmaceutical composition comprising a compound as defined in any one of the claims 1-52 and a pharmaceutically acceptable carrier.

58. The pharmaceutical composition according to claim 57, which is in unit dosage form.

59. The pharmaceutical composition according to claim 58, wherein each unit dosage form comprises 0.1-250 mg of the compound.

60. The pharmaceutical composition according to any one of the claims 57-59, wherein the compound is as defined in claim 54.

61. The pharmaceutical composition according to any one of the claims 57-59, wherein the compound is as defined in claim 55.

62. The pharmaceutical composition according to any one of the claims 57-59, wherein the compound is as defined in claim 56.

63. The pharmaceutical composition according to any one of the claims 57-62, which further comprises one or more other chemotherapeutic agents.

64. A method of treating a mammal suffering from or being susceptible to cancer, the method comprising administering to the mammal a therapeutically effective amount of a compound according to any of the claims 1-52.

65. The method according to claim 64, wherein the compound is administered in combination with one or more other chemotherapeutic agents.
